POWER SUPPLY

Sinewave combo UPS

UTL claims to have launched India's first sinewave combo UPS. Available in the capacities of 600 VA to 3 kVA, it can run in both inverter and UPS modes.

The UPS gives pure sinewave output and has an inbuilt AVR facility. It

is absolutely safe from smoke or sound pollution and is capable of any kind of load, like computers, tubelights, fans, coolers and motors. You can get backup as per your choice. That means it will discharge according to the load put on the battery.

Other features include SMPS charging, low power consumption and no-load current of less than 1.2 amp.

LIGHTING

12W PowerLED downlighter

Binay has introduced a 15.2x15.2cm² 12W recessed PowerLED down-

lighter.

The downlighter (Model 6S-R-9-12W-CLR-CW) is available in both round and square shapes, in cool white and warm white light. It is designed to replace the light output of a standard 2x18W CFL downlighter (which has a total wattage consumption of 36W for two CFLs plus 8W for presumable ballast loss, or a total of 44W). Therefore each such LED downlighter saves 50 to 75 per cent energy over existing CFL downlighters, apart from offering the advantage of maintenance-free long life of 10 to 15 years. The light output remains the same in spite of input voltage variation from 90V to 250V.

Semiconductor light source

Seoul Semiconductor's Acriche is an AC-DC converterless semiconductor

light source driven at AC, differentiated from general DC-driven LEDs requiring converters. This enables Acriche to be operated for over 30,000 hours and

provide with solution for the problem of the lifespan of LEDs shortened by converters with 10,000 to 20,000 hours of lifespan. So Acriche maximises the lifetime-related advantage of LEDs.

TEST & MEASUREMENT

Oscilloscopes

Scientific Mes Technik has introduced a new family of 350MHz DSO/MSO oscilloscopes from HAMEG Instruments, Germany. Featuring 4 GS/s and 2 MB

of memory per channel, these DSOs can easily be upgraded to MSO functionality with up to

16 active logic channels by simply plugging in an optional logic probe.

Frequently used functions such as run/stop, single, norm-trigger, slope and source are directly accessible via dedicated buttons, so there is no need to dig in deep menus. The adjustment of many settings, e.g., logic trigger and measurement functions, is graphically supported.

Diesel particulate filter soot sensor

GE Sensing & Inspection Technologies has announced the ACCUSOLVE advanced diesel particulate filter (DPF) soot sensor that helps reduce emissions and improve fuel economy for diesel engines.

ACCUSOLVE provides real-time
