

soot loading data and meets the harsh environment and life requirements of on-road, off-road and industrial heavy-duty diesel applications. It utilises radio frequency technology to achieve much more accurate measurement of DPF soot loadings than conventional differential pressure sensors available in the market.

TOOLS & EQUIPMENT

GPS locator

Eltech Enterprises has introduced a pocket-size GPS locator device called Sonitel that can record routes and

locations by storing data (longitude, latitude and altitude) from GPS satellites. This data when mapped with

Google Earth, can be seen and saved in computer.

Photos taken from the digital camera/mobile phone can also be merged with the GPS locator, thus specifying where the photo was taken.

The GPS locator is an offline, standalone device which doesn't require any GSM/GPRS server. It has a 32MB memory, i.e., it can store up to a one month long data.

Integrated digital key phone

Matrix Telecom has launched an elegantly designed key phone (EON48) that offers intuitive user interface and touch-sense navigation for efficient call management and one-touch access to system features.

Today's enterprises need connectivity to varied telecom networks like the VoIP, GSM, CDMA and ISDN. Eon48

fulfils this need by providing an easy access to these networks.

COMPONENTS

Motherboards

GIGABYTE's X58/P45/P43/P41 series motherboards support Creative's latest Sound Blaster X-Fi technologies, delivering a premium audio quality and listening experience from your PC.

X-Fi Xtreme Fidelity is the new audio standard from Creative that deliv-

ers superior 3D audio solutions. At the heart of X-Fi Xtreme Fidelity lie X-Fi CMSS-3D Virtual, X-Fi Crystalizer and EAX ADVANCED HD 4.0 technologies. X-Fi CMSS-3D Virtual technology expands your stereo MP3s and digital movies into surround sound over multichannel speakers, stereo speakers or even headphones. X-Fi Crystalizer technology restores the detail and vibrancy to your compressed music and movies by digitally re-mastering all the highs and lows, while leaving the mid range (vocals) untouched. EAX ADVANCED HD 4.0, with its state-of-the-art multi-environment rendering

and reverb modeling, delivers a much more realistic and immersive 3D gaming experience than is possible with standard motherboard audio.

Graphics SoC for dashboards

Fujitsu Microelectronics Asia Pte Ltd (FMAL) has launched a graphics controller system-on-chip (SoC) for automotive infotainment systems.

The controller (MB86298) is said to offer the highest-class graphics ca-

pability for embedded systems. It can process four input video streams while outputting video to four displays. The video input can be modified, synthesised together and put on 3D graphics surfaces within a single screen. Subsequently, with four cameras mounted on all sides of an automobile (front, back, left and right), it is possible to freely choose the desired viewpoint and form for display.

Optocoupler

For industrial system designers, Fairchild Semiconductor has launched an optocoupler solution (FOD8001) with excellent noise immunity.

The optocoupler's integrated circuits and light-emitting diode (LED) are assembled on a coplanar process, which helps to reduce package capacitance between input and output and improve noise immunity. It features 25kV/μs@1500Vcm dynamic common-
