8-bit microcontrollers

Microchip Technology Inc. has announced PIC18F87J90 8-bit direct LCD-drive microcontrollers (MCUs) with nanoWatt technology. The 64- and 80-pin devices feature a 64-128kB

Flash memory, 4kB RAM, real-time clock and calendar, and charge time measurement peripheral for capacitive-touch sensing or precise time measurement.

The PIC18F87J90 devices are pin-compatible with Microchip's PIC18F85J90 devices, providing an easy migration path across Microchip's entire LCD-drive MCU family and simplified application upgrades.

LED drivers

Recom has extended its RCD series of constant-current LED drivers to a maximum of 1200 mA providing higher currents needed by the next generation of high-brightness LEDs. The RCD-24-1.0 and RCD-24-1.2 DC-DC convert-

ers deliver maximum current of 1A and 1.2A, respectively, from a wide input voltage range of 5V to 36V DC.

While measuring only $22 \times 12.5 \times 8.5$ mm³, the modules are completely plug-'n'-play requiring no external components,

thus reducing the circuit footprint by up to 50 per cent as compared to alternative discrete solutions.

AVR microcontrollers

Atmel has announced a new family of tiny AVR microcontrollers for applications that run from a single battery, such as AA, AAA or coin cell. ATtiny43U, the first member of this family,

is a perfect fit for portable battery-powered consumer applications like

phone accessories, remote controls, sporting goods and personal care products. ATtiny43U has 4 kB of Flash memory and 64 bytes of in-system programmable EEPROM.

MISCELLANEOUS

Speakers

Cyberstar Infocom has introduced Creative's Inspire T6100 speakers in India. The two-way front speakers feature a tweeter and mid-range driver to deliver hi-fi sound from your desktop PC or home theatre setup. With the powerful

horizontally mounted centre speaker, movie dialogues become clearer and more precise, right in front of you. The

5.1-channel surround speaker system is supported by a well-tuned subwoofer system.

Digital photo frames

ViewSonic has launched slim and stylish digital photo frames with 17.8cm (with/without multimedia interface) and 20.3cm TFT LCDs.

Loaded with SwiftTouch technology, the frames come with hidden control

buttons that illuminate when touched and let the users easily select photo, slideshow, movie and

music options. A high screen resolution of 800×480 or 800×600 pixels with contrast ratio of 500:1 displays pictures in beautiful colours with vivid details.

The internal memory of up to 2 GB offers ample storage space for your choicest of photographs, videos and music. Combined with USB 2.0 port and a 7-in-1 memory card, the frames allow for fast import of photos from a camera, computer or thumb drive.
