

ULTRATECH PROFESSIONAL LIGHTING

Super Flux LED Series

0.3W-0.5W Multi-Chips LED Series

1 Watt Power LED Standard Series

Square-chipped Waterproof LED Module

Specialist in:

- Wall Washers
- MR16 Bulbs
- Video Walls
- Stage Lights
- Solar Street Light
- Flexible Stripes
- Signages

0.2-0.3 Watt Multi Chips LED Series

Standard LED Series

3528 Multi Chips White Color LED Series

AVAGO CREE OSRAM ACP

ELECTRONICS COMPONENTS PRODUCTS

168/123, Mangal Market, Bhagirath Place, Delhi-110006 Tel.: (0) 23863476, 66310606.
 Fax: 011-23869307 M.: 9911135222, 9810835000, China No. 0086-1325004000

Technical know-how Relay type stabilizer. 8 Steps with 3 Relays!

Medi, established in 1987, pioneers in Analog, Digital, Power Electronics, Microcontroller, DSP and RF designs

After the launching IGBT based Static voltage Stabilizer because of the pressure from customers MEDI has come up with a low cost microcontroller based binary mode relay type stabilizer design.

Features: ▶ 8 step regulation only with 3 relays ▶ Input: 120V – 280V, Output 210V – 240V ▶ Seven segment LED digital voltmeter for input voltage, output voltage, load current and room temperature ▶ Best suitable for AC with selection switch for energy save mode and sleep mode ▶ Digital room temperature sensor and display ▶ High voltage and low voltage cut-off ▶ Overload display, buzzer indication and cut-off ▶ Short circuit cut-off with buzzer indication and display ▶ Micro-controller based zero cross relay change over ▶ Turn on time delay for AC and refrigerator ▶ PCB mounted relays upto 4KVA, external relays for above 4KVA ▶ LED only model also.

Energy saving Intelligent sleep mode suitable for A.C User can switch on this mode at the time of sleeping. Stabilizer will sense the room temperature. It will start from 18° and will slowly increase to 28° in a span of 8 hours. In morning when you come out of room there will not be much temperature difference. This saves energy as well as good for health.

Microcontroller based calculated zero-cross relay changeover will increase the product life and performance. The micro-controller will calculate the time taken by the relay contact to move from NC to NO and vice-versa. Accordingly the controller will turn on the relay earlier than zero crossing so the contact will happen at zero crossing. This will increase the relay life drastically.

Short circuit / Overload cut-off with buzzer indication and display – If there is any short circuit or above 600% of rated full load occurs, the stabilizer will instantaneously cut-off to avoid the hazard. Overload and short circuit protections are "must" for every stabilizer when reliability is concerned which most of the stabilizers in the market do not have.

Material cost of PCB (upto 4KVA) = Rs.350. Transformer cost extra Technology cost – Rs. 80,000. No product, only technology
