**Price
Rs 399,000
approx.**

barometer, hygrometer, compass and water-resistance are the features to be considered.

For divers, sports watches are built to resist water. But beware, there is a difference between water-resistant and water-proof watches. Many models are rated to withstand water pressure up to 100 metres, though exceptions may be there. In contrast to the term 'waterproof,' water resistance is not a permanent condition, it must be maintained. In some brands, the crown must be fully recessed and parts such as the crystal, case and push buttons must remain intact for the watch to stay water-resistant. For instance, if your

Guess

- Stylish design
- Pink dial

**Price
Rs 7000 to
10,000**

watch is resistant to 50 metres, you can go shower or swim with it but in shallow waters.

Japanese brand Seiko uses the bar rating to define the water-resistance level of its watches. So a 3-bar watch is

the Suunto Lumi features an adjustable day counter to or from a personal event, such as a deadline or a friend's birthday, as well as daily sunrise and sunset times. Programmable for specific regions and cities, the sunrise and sunset times can help the user arrive at a destination before nightfall or assess remaining daylight for running, hiking or gardening.

Available in various styles, the Suunto Lumi is priced upwards of Rs 15,000.

Citizen's Sky-NaviHawk wrist-watches aid pilots in navigating aircrafts. These watches come with flight chronographs to indicate the speed, time and distance. When any two of these variables are known, the watch can calculate the third. Even the rate of fuel consumption and the amount of fuel left in the aircraft can be calculated by a simple mechanism of rotating the bezel
