

Short-term Certificate Courses

- Duration up to 10 days
- Limited seats
- First come first served
- Don't wait, join now

At Bangalore & New Delhi
EFY Tech Centers

Who can benefit?

▶ Electronics engineering students, hobbyists, working professionals wanting to learn more and job seekers.

What do they get out of it?

▶ Job seekers and working professionals add to their qualifications, and students and hobbyists assemble exciting engineering projects on their own.

Basics of Electronics

All those dealing with electronic circuit design, development and assembly require knowledge of basic electronic components. In this course they are made to familiarise with commonly used active and passive electronic components like resistors, capacitors, inductors, transformers, diodes, transistors and electronic hardware like switches, relays, connectors and cables.

Students are taught use of basic building blocks of electronic circuits using sensors, 555 timers, op-amp and other commonly used circuits in making projects. They also learn soldering and use of test equipment in fault finding. Finally, the students construct a small utility project, which they take home with them.

Duration of the Course: 5 Days (30 Hours). **Fees:** Rs. 4000/- **Eligibility:** Engineering Students, Diploma Holders, 12th Pass with Physics, Hobbyists
Certification By: EFY Enterprises.

PCB Designing

Learn to design PCBs using Eagle software. Gain understanding of the basic concepts of PCB design and skills in drawing the schematic, editing and routing, and creation of a library. Make a PCB layout of an electronic circuit with various components such as a microcontroller, ICs, transistors, diodes, passive components, switches and connectors.

Duration: 5 Days (30 hours). **Fees:** Rs 4000/-
Eligibility: Engineering Students, Working Engineers, Working Diploma Holders, Hobbyists.

Certification By: EFY Enterprises.

Robotics

The EFY Robotics course is a first step in the field of robotics engineering. The workshop covers concepts related to embedded systems, artificial intelligence, robotics and automation. One will learn role of mechanical as well as electronic hardware used in making of a robot. One will also be exposed to programming a microcontroller used in construction of a robot. At the end of the workshop you would have constructed your own robot. Each trainee will take with him the robot assembled by him.

Duration: 10 Days (60 Hours). **Fees:** Rs. 8000/-
Eligibility: Engineering Students, Working Engineers, Working Diploma Holders

Certification By: EFY Enterprises.

PIC16F877A Microcontroller

It covers architecture of PIC16F877A microcontroller, instruction sets, addressing modes, Assembly language programming concept, I/O ports usages, interrupts, timers/counters, PWM, analogue-to-digital converter, UART, I2C bus operation, serial EEPROM, interfacing of LED, pushbutton, 7-segment display, LCD, matrix keyboard, relay, stepper motor, etc. Hands-on training on use of MPLABIDE and MPLABICD2 is also given. We are fully equipped for practical oriented syllabus.

Duration: 10 Days (60 Hours). **Fees:** Rs. 6000/-
Eligibility: Engineering Students, Working Engineers, Working Diploma Holders.

Certification By: Microchip Technology INC., USA
(Leading manufacturers of microcontrollers).

Renesas Microcontroller

In this 60 hours duration hand-on workshop, applications of R8C microcontroller are taught, which involves various practical aspects of design and development, architecture, memory organization, instruction set, programming in Assembly language, I/O ports, timers, on-chip peripherals (ADC, UART, I2C, etc). Besides this, interfacing with external peripherals like LCD, stepper motor, seven-segment display, keyboard, relay and communication with PC will be done. Hands-on training on simulation, debugging and programming is part of the training.

Duration: 10 Days (60 Hours). **Fees:** Rs. 6000/-
Eligibility: Done a Basic course in C Language Programming.

Certification By: EFY Enterprises.

Embedded Systems

Embedded systems are specially designed for particular purposes to do the task as directed by the developer, without human intervention. The controller which embeds system properties into one single chip and it is able to take the control of the system is called Embedded System.

Learn about embedded computing, embedded system architecture, designing embedded computing platform, programming embedded systems in C language, operating systems (Linux), using PIC and Renesas Microcontroller.

Duration: 48 Days. **Fee:** Rs. 20000/- **Eligibility:** Engineering Students, Working Engineers, Working Diploma Holders.

Certification By: EFY Enterprises.

Accommodation can be arranged in a private hostel/guest house on prior request.

Mode of payment: Please add 10.3% Service Tax while paying fee. The fee may be paid in cash or through a DD in the name of **EFY Enterprises Pvt Ltd**, payable at Delhi or Bangalore. You can pay the entire fee at one go or register by paying Rs 1000 as advance towards the course fee.

Payments should be sent to:

Ms Jayashree, EFY Tech Center

No. 9, 17 Main First Cross HAL Second Stage, Indira Nagar, Bangalore 560008. Phone: 080-25260398

Ms. Rinku, EFY Tech Center

D88-5, Okhla Industrial Area, Phase 1, New Delhi 110020
