LIGHTING

PowerLED ceiling light

BINAY has launched 300×300mm² PowerLED luminaires that are suitable for indoor mounting on ceilings. Manufactured with long-life, high-intensity LEDs having efficiency of 100 lumens per watt in cool white (5500-6500°K), these lamps (model 300² MiniATM-1x1) are available in surface-mount or recess-mount fittings. They can be recess-mounted in a square cutout of 300×300 mm².

The luminaires are ideal for mounting in corridors, small rooms, kitchens and other small areas in commercial and residential structures. These are available in 12W, 20W and 30W ratings. The designed life is 50,000 hours to L70 or 100,000 hours to L50.

7W LED spotlights

GlaciaTech Inc. has launched an environment-friendly, high-brightness LED spotlight in cool white and warm white. The 7W GL-Spotlight directly replaces mercury lamps and consumes not more than 10 watts of power. The lifespan of these lamps is 20,000 hours compared to the diminutive 3000-hour life expectancy of standard

mercury lamps. The predicted power savings rate is 87 per cent.

LED tower lights

A series of bright, pre-assembled indicator lights allowing multiple levels to be illuminated simultaneously has been introduced by Banner Engineering. The new indicators (EZ-LIGHT TL50) can be ordered in one to five colours and stacked in any order to satisfy many industrial and retail applications.

TL50 lights are designed to use on any machinery requiring external indicators, as well as retail point-of-sale systems. Industrial applications include automotive, assembly, packaging, materials handling, pharmaceutical and semiconductor equipment. Functions that can be displayed include machine on/off, call for

material or maintenance, and indication of the current process or activity.

The 50mm diameter LEDs provide highly visible status indication with long life and minimal power consumption. The gray housing prevents ambient light from causing operator confusion regarding which lights are activated.

STORAGE

Portable hard drive

Transcend has introduced a new portable hard drive that combines

good looks and shockproof features in a compact portable size. Similar in size and weight to a deck of playing cards, the 4.6cm StoreJet 18M is clad in a sporty two-tone contrast colour scheme. It features an advanced dual-stage shock-protection system that incorporates internal suspension technology with an extra-durable, vibration/impact-dampening silicone outer shell.

Fully compliant with USB 2.0 specifications, the drive features a one-touch auto-backup button that

lets users instantly backup and synchronise data with their notebook or desktop PC. It is priced at Rs 6600 and available with 120GB storage capacity.

16GB SD card

KINGMAX claims to have introduced the world's highest-capacity waterproof SD card. The 16GB SD card adopts PIP technology inside, which has passed the waterproof test and is IPX7-certified from SGS. In addition, due to the unique packing technology, it prevents piracy. The built-in error-correcting code detects and corrects transfer errors and supports 'contents protection for recordable media' mechanism.

The card is available in 2GB, 4GB, 8GB and 16GB capacities.
