Korean won will be spent on development of eco-friendly products and 2.3 trillion Korean won on energy-saving technologies and greening of manufacturing facilities.

The Eco-Management 2013 plan includes reducing greenhouse gas emissions normalised by sales from manufacturing facilities by 50 per cent; cutting total indirect greenhouse gas emissions from all products by 84 million tonnes over a five-year period through 2013; ensuring 100 per cent of Samsung's products are eco-friendly and exceed global eco-mark standards; and enhancing green partnerships with suppliers and partners.

Samsung will reduce greenhouse gas emissions from manufacturing facilities by 50 per cent by 2013 on a financial emissions intensity basis, taking 2008 as the base year. In order to achieve this, LCD and semiconductor lines will introduce PFC and SF6 reduction technologies, and enhance energy management systems.

### **Philips acquires Teletrol**

Royal Philips Electronics has acquired Teletrol Systems—a supplier of integrated solutions for simultaneous multi-site management of lighting and energy usage. The Teletrol product portfolio will strengthen Philips' control solutions for institutional customers, including the networked management of lighting and environmental facilities.

Teletrol's operations will be incorporated into the lighting electronics group of Philips. The addition of Teletrol builds upon a programme of strategic acquisitions by Philips to expand the range of complete solutions it can offer across the lighting value chain.

Earlier this year, Philips had acquired the Australian lighting controls company Dynalite, while growing its capabilities in architectural and entertainment lighting solutions with the acquisitions of Ilti Luce in Italy and Seleon in New Zealand.

### **OKI Data to acquire Renesas production line**

OKI Digital Imaging Corporation (ODI) will acquire the land, buildings and utilities of the former semiconductor front-end process line of the Gunma Development Design and Device Division of Renesas Eastern Japan Semiconductor, Inc.

OKI Data's medium-term business plan adopted in FY2008 calls for a doubling of the current level of LED printer sales by FY2011, and to accomplish this, the company must increase the scale of its LED production operations. ODI is an OKI Data subsidiary that develops and manufactures print heads for LED printers. Development and LED front-end process production work currently take place at ODI's Hachioji facility. These operations will be transferred to the new facility acquired from Renesas, which will go on-line in its new capacity in April 2010.

### **Epson to transfer part of LCD business assets to Sony**

Japan-based Seiko Epson Corporation will transfer to the Sony group certain assets of the small- and medium-sized TFT liquid-crystal display (LCD) business operated by Epson Imaging Devices Corporation.

Placing top priority on continuing to meet customer requirements, the sales function for small- and medium-sized TFT LCD business operated by Epson Imaging will first be transferred to the Sony group within 2009. Thereafter, certain manufacturing-related assets for such business owned by Epson Imaging will be transferred to Sony Mobile Display Corporation (SMD) on April 1, 2010.

Also included in the agreement are transfer of certain intellectual property, including patents, software and technical information, relating to small- and medium-sized TFT LCDs (excluding high-temperature polysilicon TFT LCDs, etc); and secondment of certain Epson Imaging and other Epson group employees.
