

Do-It-Yourself PC Upgrade Projects

This book shows you how to make the most of your PC's built-in features, from telephony to television, from networking to unbreakable encryption. You will also find out how to add powerful hardware and software to your PC, improve performance and expand your computer's capabilities.

Inside you'll find 24 self-contained projects. The early projects are easy, and the later projects are difficult. Most of the projects are independent, so you can tackle the projects that interest you in any order.

So get started to transform your PC into a video phone, add two or more extra monitors so you can see all your work at once, set up your PC as a recording studio, create a permanent wireless network or a temporary one, back up your data safely, digitise your paper documents for safekeeping, secure your secrets in a virtual locker, connect TiVo to your home network and much more.

EAG 2009-10

The latest Electronics For You Annual Guide (EAG) is rearranged as Yellow Pages for B2B buyers of electronics and tech products and services in India.

The product category index makes it easy for you to browse through over 2000-plus product categories, which are listed alphabetically (buying guide).

In yellow pages, under each product category, you get a list of firms that either manufacture those products in India, or import and sell them in India.

In directory, you will find over 5500 organisations listed alphabetically. So if you know the name of a firm, you can get its contact details, profile and at times details of its branch offices, here.

Brand Index is an alphabetical list of brands along with the name of the firms that own them.

Also listed are firms that changed their names last year, important government organisations related to the electronics industry and industry associations related to electronics.
