

Safe Campus

**Howell's initiative to keep
OUR CHILDREN SAFE**

Campus security (whether it's of School, College, Technical Institute or University) is necessary for learning to occur, education being able to continue without disruption, without harm, without danger. It's basically the best way to get the most out of the learning process. It's in fact the foundation for an effective learning environment.

Today our educational institutions are facing diverse security issues. There is a colossal distress over **Ragging, Bullying, Vandalism, Gun violence, use of drugs and sexual violence**, within the campus. Then schools are also facing what we call "new crimes" such as **terrorism**. We are aware that educational institutions are soft targets for terrorist groups. Remember the terrorist attack on Beslan School in Russia in which more than 180 children died. That can happen anywhere, anytime.

In India, our schools are also face to face with **Immoral and outrageous behavior of teachers towards students**. Many precious lives were lost and many more remain in the constant fear and danger. Our educational institutions are confronted with the ultimate challenge to deal with the issues like these. Therefore it is imperative that we have a clear perspective about school security. The wisdom dictates that it is better not to stick our heads in the sand and deny the problem. The challenge is to face it and explore the ways to address it. School authorities are sometimes apprehensive about collecting and maintaining actual data about crime that occurs within their school campus for fear that the results will reflect negatively on a school's reputation and administration's management skills. However, we must realize that only by acknowledging and analyzing the problem, we can solve it.

Dear Friends, time has come to take specific steps to mitigate the different threats faced by our institutions. Let us join hands towards making our campus safe and education to flourish

before your campus becomes next.
