

~ A MESSAGE FROM THE SUN ~

“LAB TESTS ARE GREAT. BUT IT'S HIGH-VOLUME PRODUCTION THAT WILL REALLY PUT A SMILE ON MY FACE.

I've heard some impressive-sounding announcements about recent laboratory successes in converting my energy into electricity. But to make solar power the global resource it's capable of becoming, you're going to have to expand on those lab results with high volume panel production. And you're going to have to deploy those panels on a massive, worldwide scale. I'm talking gigantic panels. Lots of them. Everywhere. Which is where Applied Materials comes in. They've spent the last 40 years mastering the challenge of taking scientific breakthroughs and scaling them into commercialized products, at lower and lower prices, year after year. Now they're doing for solar panels what they've already done for computer chips and flat panel displays. I mean, they can *already* deliver 5.7m² thin film solar panels at over 8% efficiency in high volume production. Which makes me one happy mid-sized star.”

PROUD SPONSOR OF THE SUN.

For over 40 years, Applied Materials has been the world leader in nanomanufacturing technology, and is now the world leader in solar photovoltaic manufacturing equipment.
