

The World's Lowest Sleep Current MCUs: PIC® MCUs with nanoWatt XLP Technology

Microcontrollers

Digital Signal
Controllers

Analog

Serial
EEPROMs

nanoWatt XLP Technology offers the industry's lowest currents for Sleep, where extreme low power applications spend up to 99% of their time.

- **Extend Battery Life**
 - Sleep current down to 20 nA
 - Brown-out Reset down to 45 nA
 - Watchdog Timer down to 400 nA
 - Real time clock down to 500 nA
- **Extreme Flexibility**
 - 5 different low power modes to improve power & performance in your application
 - Many low-power supervisors, alarms, and wake-up sources
- **Expanded Peripheral Set**
 - Integrated USB, LCD, RTCC & touch sensing
 - Eliminates costly external components
