

Choose Your Gizmos

■ ABHIJIT PAUL CHOUDHURY

Gadgets have become an integral part of our daily life. They have made our tasks easy, fast and more efficient. Let's take a look at some of the new gadgets being offered in the market

Apple's Magic Mouse

Apple has designed a new mouse named 'The Magic Mouse,' which uses the same multi-touch technology first introduced in the iPhone. This multi-touch feature enables interaction with portable devices through gestures. Gestures are introduced in a mouse for the first time.

The main component of this mouse is an in-built chip. This chip tells the mouse what exactly the user wants to do? Whenever you double click, scroll or rest your hand on the mouse, the chip interprets your gestures and responds accordingly. This mouse also uses laser tracking technology and can be wirelessly connected to any Mac using Bluetooth. Moreover, you can have a secure connection up to 10 metres away. It also saves battery power as it can identify the lean period when the mouse is not in use when it enters

into a low-power-consumption mode.

The minimum system requirement for this mouse is a Bluetooth-enabled Mac computer, Mac OS X v10.5.8 or later with wireless mouse software update 1.0 or Mac OS X v10.6.1 or later with wireless mouse software update 1.0. This new magic mouse will come with every new iMac but is also available independently.

Kingston DataTraveler 200

Kingston has recently launched its new DataTraveler 200, which comes in blue and black (32 GB), yellow and black (64 GB) and pitch black (128 GB) colours. This Flash drive is an improvement over Kingston's earlier DataTraveler 150 Flash drive. Featuring high capacity of data storage in its 7.04cm x 1.24cm x 2.26cm dimension, DataTraveler 200 also has a retractable USB connector and security features. The software that comes along with it is Password Traveler. Using the software, you can create a secure area called 'Privacy Zone,'

which can be accessed only with the Password Traveler software.

The Flash drive also supports Windows Ready Boost. It is compatible with Windows, Linux and Mac OS. The read and write transfer of DT 200 is 12 MB/s and 10 MB/s, respectively. A few demerits of this product are: it is quite bulky and two DT 200 cannot be connected in adjacent USB ports due to their size. The password features are not supported in Linux or Mac. Kingston provides 5 years warranty for this product and lifetime tech support.
