

uPrint 3D printer from Design Tech

"Our 3D-enabled DLP projectors come with flexible, eco-friendly features and enhanced 3D display capabilities. These projectors come equipped with advanced network management capabilities, multiple inputs and 120Hz refresh compatibility for immersive

3D experience. These projectors are ideal for classroom, corporate and gaming customers," says Ghosh.

"ViewSonic's 3D-enabled 56cm LCD monitor displays brilliant graphics with extreme realism. Along with powerful performance, 120Hz frame rate combined with ultrafast video response, 1680×1050 resolution and a high contrast ratio, this monitor delivers immaculate blur-free motion and realistic 3D rendering," says Ghosh.

"As far as ViewSonic's 3D-enabled projectors are concerned, they are compatible with two leading stereoscopic 3D technologies—Texas (DLP Link) Instruments and (3D-Vision) NVIDIA. Our LCD monitor VX2268wm is compatible with stereoscopic 3D when used with NVIDIA's GeForce Stereoscopic 3D gaming technology," informs Ghosh.

Camera. Moving into the camera territory, Fujifilm has recently released a 3D camera, FinePix Real 3D W1, which uses the lenticular method explained earlier. The camera lets users enjoy 3D images without wearing special 3D glasses. "Capturing a 3D image is akin to the way our eyes see. A pair of human eyes produce two slightly offset images of the same scene, which the brain combines to perceive depth. To achieve a 3D image, it is necessary to flawlessly layer together two images," says A. Rajkumar, country general manager (DSC), FujiFilm India.

"The FinePix REAL 3D system is a revolutionary and one-of-its-kind innovation," Rajkumar claims. "Earlier, a 3D image could only be achieved by using two different cameras, as the creation of a 3D image involves shooting two identical pictures from the same perspective with a slight gap between the two cameras. It then required flawlessly layering together these two images. Now, it is possible to capture a 3D image using a single camera—FinePix REAL 3D system. The user can simply focus and shoot," adds Rajkumar.

The 3D imaging system of this camera also allows 3D printing. "The 3D print is the result of two interlaced images generated via micro lenses arranged in parallel rows on lenticular sheets. From a specified distance, the lenticular print gives

CAUTION NOTICE

Notice is hereby given to all concerned including the Manufacturers, Merchants and Traders dealing inter alia with "LED Aviation Obstruction Lighting Device" Our client, Kumar Krishna Rohatgi of Binay Opto Electronics Private Ltd. is the Patentee of Indian Patent No. 188995 of 9th May 1996 relating to "LED Aviation Obstruction Lighting Device". Therefore, it would not be lawful for any person without the written consent, of our client, to indulge in any act of MAKING, PURCHASING, USING (AS END-USER/CUSTOMER), OFFERING FOR SALE, SELLING OR IMPORTING such device in India during the subsistence of this patent.

It is further made known to all concerned that any unlawful act by any person would not be acceptable to our client, who may decide to take legal action against the infringers for such wrongful act in a Court of Law.

All concerned in the Trade and Commerce and hereby requested to contact the undermentioned address or any further details regarding the above and to avoid unnecessary litigation and/or legal proceedings.

BINAY LED-based Lights

PowerLED
Street
Light

PowerLED Hight Bay Light
PowerLED Strip Light

BINAY-Lighting Up The Future

- Extremely low power consumption
- Long life (in excess of 50,000 hours)
- Models with light output to match conventional street lights
- No maintenance required: very low Lifetime Ownership Cost
