

```
Fields("dateofalert") = estado.  
Recordset.Fields("dateofreview") - 3
```

We have taken this date as three days in advance from the date of review. You can change it by changing the value '3' in the statement.

By checking this date with the current system date, the number of unattended items to be attended on that day is calculated using the code defined under the form_load() event:

```
If alertdate = chkdate And  
UCase(estado.Recordset.  
Fields("atdstatus")) = "NO" Then  
total = total + 1  
End If
```

You can use the filter property of the recordset of the ADO to display only those records which are to be attended on the current day:

```
estado.Recordset.Filter = "dateof  
alert=" & chkdate & "" and  
atdstatus="NO" "
```

As datagrid control is already connected to ADO controls, the filtered records are displayed on it.

The remaining code of the form_load() event is self-explanatory:

```
Private Sub Form_Load()  
msgstr = ""  
total = 0  
DataGrid1.TabAcrossSplits = True  
chkdate = Date  
While estado.Recordset.EOF = False  
estado.Recordset.  
Fields("dateofalert") = estado.  
Recordset.Fields("dateofreview") - 3  
alertdate = estado.Recordset.  
Fields("dateofalert")  
If alertdate = chkdate And  
UCase(estado.Recordset.  
Fields("atdstatus")) = "NO" Then  
total = total + 1  
End If  
estado.Recordset.MoveNext  
Wend  
msgstr = "You have " & CStr(total) +  
" files to answer. You want to view  
them?"  
msgres = MsgBox(msgstr, vbYesNo,  
"IMPORTANT ALERT")  
If msgres = vbNo Then  
Me.Hide  
End  
Else
```

```
Form1.Caption = "ALERTS "  
DataGrid1.Visible = True  
estado.Recordset.Filter = "date  
ofalert=" & chkdate & "" and  
atdstatus="NO" "  
mestatusbar.Caption = " Total  
Records: " + CStr(estado.Recordset.  
RecordCount)  
End If  
End Sub
```

To view all the records in the database, you need to reset the filter property of the ADO control. To do this, use the code in the VIEW_Click() event:

```
estado.Refresh
```

The following code line in the VIEW_Click() event returns the total records in the recordset:

```
estado.Recordset.RecordCount
```

The complete code of the click event of command button 'view' is:

```
Private Sub VIEW_Click()  
DataGrid1.Visible = True  
estado.Refresh  
mestatusbar.Caption = "Total  
Records: " + CStr(estado.Recordset.  
RecordCount)  
Label1.Caption = "All Records"  
Form1.Caption = "ALL"  
End Sub
```

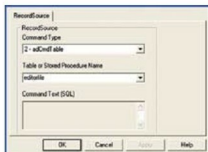

Program testing

To test the program, place folder 'ofeditor' in the root directory of 'D' drive (as the database was created and connected to the ADO from this path). Open the project, then compile and run it. You'll get a message box as shown in Screenshot 1. If you click 'yes', it will display records which are to be attended on that particular day as shown in Screenshot 2. However, when you are testing the program, the current date may not be the same as ours. If you are trying your own form and database, you need to follow the steps as mentioned above.

The datagrid properties are set such that you can add new records and edit or delete existing records on the displayed form itself. You can also open the Access database and table as shown earlier and perform the necessary changes as per your requirements.

Screenshot 7: Data link properties for connecting to the Access database

Screenshot 8: RecordSource dialog box for ADO control

To display all the records, click 'edit all' and 'add new' command buttons. To enter new records, go to the bottom record of the datagrid control and enter the relevant data in the fields using the cursor or tab key. The data is updated when you move the cursor from column to column or one row up or down.

The 'atdstat' field is used for showing the status of the attended and unattended items. Here you can type 'yes' for attended items and 'no' for unattended items. Though the alert date is equal to the current date, the files whose 'atdstat' fields are marked as 'yes' will not be displayed as alert or reminder messages. You can use this field property to mark the files as soon as these are attended, to avoid alert messages.
