TOOLS & EQUIPMENT

SMD pick-and-place machine

Essemtec has introduced a new SMD pick-and-place machine (CSM7200) which is especially suitable for flexible manufacturing of small lot series. The machine fabricates all current components up to 40x40 mm² and additionally offers an integrated dispensing system for glue or solder paste. The graphical user surface makes control and programming simple.

The CSM7200 machine offers up to 30 per cent higher camera resolution and precision, a larger component area and more vacuum tools than the previous CSM7200 model. Up

to 100 components can be upgraded on the CSM7200 simultaneously.

Pad-printing machine

Indus engineering has introduced an economical pad-printing machine (FXP-1010) with ceramic ring and magnetically sealed cup. The machine is equipped with a quick changeover image plate to facilitate fast-changing jobs and continuously variable image transfer rate to accommodate different types of articles. It uses inductive proximity sensor for trouble-free working and auto fault detection.

The machine also works in dual-impression printing mode for translu-

cent inks.

Paper insertion machine

Electromech has developed a pneumatically-operated paper insertion machine (model SCI-100). This high-speed machine automatically prepares end-folds, sizes and shoots the insulating paper into the slots of the stator stack.

The programmable automatic indexing table makes the machine flexible and user-friendly, eliminating the need for changing gears. This contributes to minimum machine set-up time and thus enhances the productivity.

The machine is available in two models to cover the wide range of frame sizes.

Dehumidifier

Cecon has designed a portable dehumidifier for removal of water/moisture from air to maintain low humidity in the enclosed area. The equipment can remove 10/12 litres of water per day depending on the humidity level and operates off single-phase 200V with very low

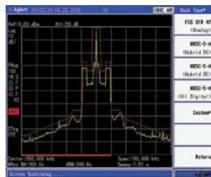

power consumption. It is particularly useful for computer rooms, libraries, record rooms, museums, telecom R&D centres and instrumentation areas.

TEST & MEASUREMENT

HD radio measurement application

Agilent Technologies has introduced an HD radio measurement application for its N9340B handheld RF spectrum analyser. This application is claimed to be the lowest-cost in-band-on-channel solution on the market with one-button auto tune and channel list functions. It supports NRSC-5 spectral emission

limit masks and includes features that enable fast and easy test. It is ideal for technicians and test engineers performing measurements on HD radio signals.

Agilent's HD Radio measurement application, the N9340B-IBC, is specifically designed to test broadcast AM and FM HD radio signals.
