

Programmable counters

R.S. Electronics has introduced low-cost, high-quality, six-digit programmable counters which can count from 1 to 999,999. The unit accepts the pulse output/sensor output. It can be set from 1 to 999,999 and the setting time range can be programmed from 0.0 to 999.9 seconds. You can also set the scale factor with decimal point shiftable up to three digits.

STORAGE

Flash disk drives

ADITECH has released EDC 4000 Series flash disk drives (popularly known as DOMs) from Taiwan-based Innodisk in India. These DOMs are available in capacities of 128 MB, 256 MB, 512 MB, 1 GB, 2 GB, 4 GB and 8 GB. Both 40- and 44-pin models are available.

EDC 4000 Series supports data transfer speed of up to 40MB/20MB per second for read/write operations.

USB flash drive

Transcend has introduced a tiny 16GB USB flash drive. The JetFlash V33 has a curved, ultra-compact (60x16.5x8.1mm³) body and weighs only 7 gm. Its pure white colour scheme is simple and cute, with a splash of colour around its cap.

The JetFlash V33 supports Windows Me/2000/XP/Vista, Mac OS 9.0/OS X and Linux Kernel 2.4.2 or later, providing seamless data exchange between different operating systems.

Solid-state drives

SanDisk has launched the next generation of flash memory-based solid-state drives (SSDs) — the pSSD. The pSSD-P2 and pSSD-S2 have capacity and performance for more full-featured

notebooks which require a robust operating system. Designed as drop-in replacements for hard-disk drives (HDDs), these have a SATA interface to meet new notebook design requirements. The SATA interface offers a boost in performance rendering these SSDs faster than HDDs in critical aspects. Boot and launch applications take just half the time of an HDD.

COMPONENTS

FET op-amp

Analog Devices, Inc. has introduced one of the industry's fastest field-effect transistor (FET) operational amplifiers. Operating at 1 GHz, the ADA4817 is designed for high-performance medical diagnostic and portable devices, as well as instrumentation equipment. It provides twice as much bandwidth with half the noise of competing devices.

Hybrid ICs for class-D amplifiers

SANYO Semiconductor has developed hybrid ICs (STK282-100-E Series) for class-D amplifiers that produce total output of 600W (300x2 channels) in

a small single package, using insulated metal substrate technology and newly developed specific driver ICs. The hybrid ICs are targeted for home theatre systems which are growing in popularity with the widespread use of wide-screen TVs.

3mm infrared emitter

Vishay Intertechnology has broadened its optoelectronics portfolio with the introduction of a 3mm infrared emitter. The VSLB3940 940nm infrared emitter features an on-axis radiant intensity of 65 mW/sr and optical power of 40 mW at 100 mA, which represents about an 8 per cent performance improvement over the larger, 5mm TSAL6200 in a 40 per cent smaller form factor.

The small size of the VSLB3940 makes it an excellent choice for the compact infrared remote control units used with digital cameras, notebook PCs and MP3/video players.

Combined audio processing and amplifier chip

STMicroelectronics has introduced a combined audio processing and amplifier chip with enhanced features to increase performance of compact home-audio equipment. The STA339BWS is optimised for applications using small, low-cost speakers, such as flat-panel TVs and docking stations.

The STA339BWS combines IP from ST's audio processing and class-D power amplifier ICs into a single chip, and includes advanced features such as multi-band dynamic range compression (DRC). DRC uses the latest sound-processing algorithms to enhance the performance of low-cost speakers and also prevents large bass signals from causing vibrations and damaging small speaker units.
