Stereo audio codec

Texas Instruments (TI) has launched a low-power stereo audio codec that enables CD-quality playback and extends battery life of portable products such as cell phones, portable navigation devices and portable media players.

The TLV320AIC3107 codec integrates a stereo headphone amplifier and mono class-D speaker amplifier to substantially reduce board area and cost by 20 per cent compared to discrete solutions.

Ultra-durable motherboards

GIGABYTE's Ultra Durable 3 Classic motherboards feature double the amount of copper for the power and ground layers of the PCB. Doubling the amount of copper provides a more effective thermal cooling solution by delivering a more efficient spreading of heat from critical areas of the motherboard such as the CPU power zone throughout the entire PCB.

The motherboards are able to deliver up to 50°C cooler working temperatures than traditional motherboards. In addition, doubling the amount of copper lowers the PCB impedance by 50 per cent.

MISCELLANEOUS

Small CFLs

Havells India has introduced a new range of eco-friendly CFLs called 'Lil-

liput.' As the name suggests, these CFLs are small in size.

The Lilliput range complies with RoHS and CE and proves to be very economical for the end consumers by assisting them in saving a significant amount of electricity.

Havells Lilliput T-3 range is available in 11W, 15W, 20W and 23W with three base caps such as B-22 for normal holders, E-27 for lamps shades, chandeliers and designer fittings, and E-14 cap. It is available in two colours: cool daylight and warm white.

Simscape language

The MathWorks has launched Simscape language that provides key capabilities for physical modeling in the Simulink environment. The Simscape language, based on the widely used MATLAB language, enables engineers to develop reusable models of components and systems for rapidly advancing technologies, such as fuel cells, wind power systems and hybrid electric vehicles. It provides fundamental blocks for mechanical, electrical, hydraulic and other physical domains, as well as a physical-network solver designed for simulating physical systems.

According to Tom Erkinen, embedded applications manager, The MathWorks Inc., "Simscape is unique by supporting C-code generation and thus enabling hardware-in-the-loop (HIL) test of embedded systems."
