

nowadays, he claimed. Priced much higher at \$900 than other netbooks, which are priced at around \$400 only, it is a fan-less device which would be available in such bold colours as garnet red and emerald green. It should be in market by February end.

3D HDTV

One of the novelties noticed at CES was the advent of 3D television, which could be viewed without the need of using special eyeglasses. Samsung as well as Panasonic were seen demonstrating their respective 3D TV sets. Of course, the effect was much better when the movie was viewed directly from the front—at least in the Samsung TV personally checked by me.

If 3D TV catches on, it may not be necessary once again to go to cinema halls to watch 3D movies, as expected by Sony's Howard Stringer. But there is no news on pricing and commercial availability of 3D TV as yet.

Miniaturised

Woo Paik, president and chief technology officer of LG Electronics, introduced their fully functional wristwatch cell phone with 3G video telephony (VT) service and GSM quad-band network capabilities. Though it is a follow-up of the prototype he introduced at CES2008, it includes such upgrades

Powermat for wireless charging

as a touch-screen interface, 3G capabilities and video calling. Its voice recognition features, for use with or without a Bluetooth headset, make call placing and looking up contacts easy. This good-looking, wearable phone will be available in Europe soon this year.

Neutrano's WristFone launched at CES has a phone, a music player and a camera inside a sleek wristwatch. The multifunction digital watch has 3-hand analogue dial with date 'screen saver' which conceals the phone, music and camera functions. Watch features include programmable alarms and to-do lists. WristFone will be available in white, black, brown, blue and pink for \$250 to \$300.

Logic Wireless unveiled the world's first cell phone with a projector built in. It plays two-hour movie besides the usual business applications which can be shown on a wall or screen. Other features include touch screen, 3-megapixel camera, GSM quad band, Blue-

tooth, GPS, Internet, PowerPoint, Excel and Word. It connects with laptop USB, TV, Xbox and Wii. At present, the phone is compatible with GSM carriers such as T-mobile and AT&T but would soon be made compatible with other network carriers as well.

Other surprises

Powermat unveiled revolutionary wireless-energy products capable of charging portable electronic devices including iPods, iPhones, cell phones, GPS, handheld games and even laptop computers. You just plug in the Powermat and place up to six (depending on the model) Powermat-enabled devices on the mat for charging. Based on the principle of magnetic induction, Powermats will be available in stores in 2009.

Tonium introduced 'Pacemaker'—a pocket-size DJ system. The music system incorporates a mixer and all the features you need to deejay anywhere, anytime. Its two independent audio channels let you play two tracks side by side so you can do your creative work with them. Pacemaker has all the functionality of a professional DJ set-up including playback controls, cue controls, audio effects, equaliser and volume control. It supports more audio formats than most other portable music players and has a 60GB hard disk drive.

Tri-Specs Inc. unveiled designer sunglasses which incorporate wireless stereo headphones and Bluetooth headset functionality. So you can listen to high-quality stereo music streamed wirelessly from a phone or MP3 player
