

TRONTEK

**RECHARGEABLE
SEALED
MAINTENANCE
FREE LEAD
ACID BATTERIES**

12V 7.5Ah

6v/4.5ah to 12v/100ah.
(2v & 4v Models Available on request)

**Preferred by leading OEMS in
India and All over World**

Trontek SMF Batteries

(Manufactured in the most modern &
contemporary Taiwan-Made Plant)

Have all the winning features:

- Lead-Calcium grid for extended life
- High discharge rate capacity
- Deep discharge recovery
- Low self discharge & long service life
- No memory effect & high performance battery
- Long life & hassle free power

Marketed In India By :-

Panasonic Neo PDP Eco plasma display

while wearing these shades. If a call is received while listening to music, the music is paused and you hear the ring-tone. There are many more features for your convenience. These sunglasses can even be fitted with prescription lenses.

Epson launched a truly home cinema system with the option of two projectors (720p and 1080p). It includes a 2.54m (100-inch) electrically operated screen with integrated LCR speakers, AV controller with built-in DVD and HDMI outputs, LCD remote control and 25.4cm (10-inch) subwoofer with 5.1 channels of amplification. It takes only four hours to install. The screen can be mounted over a bookshelf or a painting, if a plain wall is not available, as it disappears at the push of a button. The surround-sound speakers are discreetly hidden in the projector's integrated speaker cradle while all the front-channel speakers are hidden within the screen's motorised system.

Panasonic unveiled its 8.5mm (one-third-of-an-inch) thin energy-efficient Neo PDP Eco Plasma TV. Besides being the world's slimmest, the 127cm (50-inch) set is also the most energy-efficient TV. Neo PDP technology allows the plasma sets to achieve the same brightness as the 2007 models while using one-third of the energy, or to achieve three times the brightness using the same amount of energy. Neo LCD technology cuts

the energy requirement of LCD TVs to half as compared to the previous 2008 models.

CEA

CES2009 got a "good response in spite of difficult times for world economy," says Gary Shapiro, president and CEO of the USA-based Consumer Electronics Association (CEA). CEA estimates that over 110,000 visitors attended CES this year as against 141,150 in the previous year. Realising that quality is more important than quantity, CEA has started levying a US\$100 pre-registration fee for show attendance, which it is likely to continue in the future as well to limit the number of visitors. This year there were more CEO attendees at CES than in the previous years.

Gary thinks, nowadays "you can be an entrepreneur if you have a computer and the Internet" connection. Technology is throwing open lots of new opportunities, while closing some others. The world is already moving towards digital TV broadcasting and high-definition TV. February 17, 2009 will be the shut-off date for the plain, old analogue TV in the US.

The world shall be moving to IPv6 by 2010. Every home will then have an Internet address, besides the postal address. But will everyone have a home by then? ●
