

"How can I tell if a power supply is reliable?"

There's an indicator on the front.

It says "Agilent." With a typical MTBF of 40,000 hours, over half-a-century of experience, and with more than 250 models to choose from, Agilent's power supplies are the ones you can count on. In fact the array of our power supplies is so extensive, it wouldn't fit on this page. For clean, low-noise, programmable power to countless DUTs, there's an Agilent power supply for you.
