GIMP 2.6.4. GIMP is an acronym for 'GNU image manipulation program.' It is a freely distributed program for such tasks as photo retouching, image composition and image authoring. It can be used as a simple paint program, an expert-quality photo-retouching program, an online batch-processing system, a mass-production image renderer and an image format converter.

Photoscape 3.3. Photoscape is an easy-to-use photo-editing software. The editing options include resizing, brightness and colour adjustment, white balance, backlight correction, frames, balloons, mosaic mode, text addition, picture drawing, cropping, filters, red-eye removal and blooming. You can use it to create an animated GIF, divide a photo into multiple parts and capture your screen.

Inkscape. Inkscape is an open-source drawing tool that uses the World Wide Web Consortium's (W3C) scalable vector graphics format (SVG). Some supported SVG features include basic shapes, paths, text, markers, clones, alpha blending, transforms, gradients and grouping. In addition, Inkscape supports Creative Commons' metadata, node-editing, layers,

complex path operations, text-on-path, text-in-shape and SVG XML editing. It also imports several formats like EPS, PostScript, JPEG, PNG, BMP and TIFF and exports PNG as well as multiple vector-based formats.

K-3D. K-3D is free 3D modeling and animation software. It features a plugin-oriented procedural engine for all of its content. K-3D excels at polygonal modeling, and includes basic tools for NURBS, patches, curves and animation. It can be used to create and edit documents in multiple real-time OpenGL solid, shaded, texture-mapped views.

FrontDesigner 3.0. Using FrontDesigner, you can design good-looking front panels for your self-made devices. It is equipped with easy-to-use drawing functions for rectangles, polygons, ellipses, labels, drillings, etc. Specialised functions include rotation, stretching, mirroring, drilling and milling. Also get the advantage of exactly fitting coloured and B&W symbols and labels, pre-defined and user-editable library, a scale assistant that creates scales for switches, potentiometers and instruments, and measurement options that simplify drilling.
