

Run GNU-Linux ~~'on'~~ in WINDOWS

What if I tell you that you can install GNU-Linux 'in' Windows just like any other application? This article will tell you how to use Ubuntu GNU-Linux without messing up with your partitions and without worrying that you don't know too much about GNU-Linux. It is as easy as sending out an e-mail

■ SWAPNIL BHARTIYA & NIRAJ SAHAY

Are you a Windows user who has always been apprehensive of using GNU-Linux, as many people say it's too complicated for home users? I guess they are correct, because it's quite clear that they have not touched any GNU-Linux machine for at least the last few years.

GNU-Linux is today much more simple to install on any machine, but this is not what we are going to discuss. We are going to tell you about something even more exciting. But before we do that, let me ask you if you have ever installed any software on your Windows machine. And if you have, how difficult was that? Like taking a walk in the park, right?

Now, what if we tell you that you can install and run one of the most popular GNU-Linux operating systems, Ubuntu, inside your Windows machine just the way you install any other software.

Let me repeat: You can now install Ubuntu in your Windows just as any other software and you can very easily remove it too, again, like another software. So if you are interested, let's take the next step.

The Intrepid Ibx (Ubuntu 8.10)

What you need to start with is first create a LiveCD of the Ubuntu operating system, as described in the box. When you

Installation

1. Download Infra Recorder from the Utility section of the EFY DVD and install on your system if you do not have any CD/DVD burning software already installed on your system.
2. Insert a blank CD in the CD/DVD writing drive and select 'Do Nothing' or 'Cancel' if an autorun dialogue pops up.
3. Open Infra Recorder, and select the 'Actions' menu, then 'Burn Image' or click 'Write Image' on the centre of the screen.
4. Select the Ubuntu CD image file you want to use, then click 'Open.'
5. In the dialogue, click 'Ok.'

insert the Ubuntu CD in the drive, you will see a window pop up (Fig. 1). You will find three options here. Select the second one that says "Install Inside Windows." When you click this, you will be greeted by another window (Fig. 2) that says you are about to install Ubuntu. You can see six options here.

'Installation Drive' is the partition on which you want to install Ubuntu. You can change the partition by selecting it from the drop-down menu. Choose a partition that has at least 5-10 GB of free space.

The second option says 'Installation Size.' This is the space on your hard drive that you want Ubuntu to use. We recommend you give at least 6-10 GB of space to Ubuntu. Now you can select that too from the drop-down menu.

Leave the third option as it is. The fourth option is
