

Application software like PageMaker provide an easy way to access a page from the document and do necessary changes such as add a new page, edit the desired text on a page and then save it. These are just a tip of the iceberg. The PageMaker software has many more sophisticated facilities.

The OLE is an automated environment of server-and-client nature. Properties like Action, AutoActivate, Copy, Paste and DoVerb enable you to use OLE as a client platform in the applications. Application software like Word, Excel and Paint can be automated in the applications as server and client using OLE.

In this article, we have used MS Word automation. As a result, the MS Word acts as the server and OLE as the client. Using such adaptability, many of the Microsoft Word facilities can be easily borrowed either automatically or by program code onto the OLE platform and used as if Microsoft Word is active in the application.

This program allows you to open any existing Word document up to four pages long, which can be placed onto the OLE environment to make changes and save it as if working with Microsoft Word. We have used only a few of the OLE properties in the program that meet our requirements. The program output of desktop publishing

Form design

The program is a single-form-based VB application, designed and tested under Microsoft Visual Basic 6 and Windows XP platform using Microsoft Office Word 2003.

Launch Visual Basic from 'start' menu on the desktop and select 'standard EXE' from 'new project' option to open a new Visual Basic form. Resize the form as shown in Screenshot 1 and keep its caption property blank. Place the OLE on the form, select the Word document and click 'ok' button. Place a label in rectangular shape on the form in the centre position, resize

and change the border colour to blue. Place another rectangular shape on the form, position and resize it. Place one command button, position it on top right side of the screen as shown and change its name property to 'back', style property to 'graphical' and background colour property to 'green.'

Since Microsoft Word is used in the program, it requires a reference. For this, select 'references' option from 'project' menu and tick the boxes against Microsoft Word 11.0 and Microsoft Office 11.0 object library options. The decimal number '11.0' is
