LCD digital photo frames

Terminal has launched the PANDIGITAL picture frames that give a new life to your photographs right outside the camera. The stylish photo frames instantly boot up images from the media cards or on-board memory when turned on. These come with a remote

control for easy access and loading and editing options.

The PANDIGITAL picture frames have up to 256 MB of memory and can read up to six different memory cards. These also include a USB device chip set that allows your PC or laptop to automatically recognise the picture frames for file transfers.

Softphone

Tadiran Telecom has launched a next-generation telephony client that allows you to integrate telephony experience with laptop or desktop computer.

Called SeaBeam, it is a SIP-compliant softphone available in software and stick versions. The software version is a downloadable self-extracting executable file, while the stick ver-

sion is a USB Flash drive that houses the SeaBeam, which is automatically launched when you plug the stick into your computer.

The SeaBeam stick package also includes a built-in audio device and portable earset microphone, so you can easily use SeaBeam from any computer. Voice and video calls can be received and initiated independent of location, from any place over the global IP network. A pack of 10 sticks costs Rs 45,000.

Bike security system

Micro Technologies has launched a security system for all types of two-wheeler vehicles. The Micro bike security system comprises a compact hardware unit, which is fitted onto the bike, and a small receiver unit. It immediately alerts the owner through an audio alarm along with a vibrator in case if anyone opens the handle lock of the bike, removes side/main stand of the bike, tampers with the ignition of the bike or tries to start the bike through hotwiring.

Cable mesh

MX cable mesh can help to make your office/home/industry look much neater by putting various cables in one single cover. With it, you are able to get rid of that disorganised look. Instead of having cables that are scattered about, everything will look as if it is put up nicely. The cable management system can completely mask the cables, so the focus will be only on the equipment that you are displaying, instead of the mess that your equipment have created.

The cable mesh is available in different colours and sizes (10, 16, 22, 28 and 34 mm).
