

NVIDIA Tesla personal supercomputer

puter is based on NVIDIA's CUDA parallel computing architecture and powered by up to 960 parallel processing cores. It will go on sale for more than 4000 pounds.

The designers of this novel super-computer believe that it will be able to help doctors process the results for brain and body scans much more quickly, allowing them to tell patients within hours instead of days whether they have a tumour.

## Computing for less than \$100

The X550 virtual desktop from NComputing allows computing for less than \$100 per user.

"We have slashed the cost of computing with our game-changing technology that delivers the full power and functionality of today's applications," said Stephen Dukker, CEO and chairman of NComputing. "This will become even more important as the

global economic crisis puts mounting pressure on IT budgets."

The NComputing solution is based on a simple fact: today's PCs are so powerful that the vast majority of applications use only a small fraction of the computer's capacity. NComputing technology creates multiple virtual desktops on a single PC so that many users can tap the unused capacity and share it as if each person had their own computer. Each X550 kit delivers a rich multimedia computing experience to five additional users for a list price of only \$449. With a second X550 kit, a total of eleven users can share a single PC. Unlike other desktop virtualisation solutions, the highly-efficient X550 delivers rich multimedia and full-screen video.

## Low-cost PC alternative for Net access

Qualcomm has introduced a low-cost PC alternative for wireless Internet access. Kayak is a small device which houses a processor, graphics chip, input/output (I/O) ports and rabbit-like antennae for Internet connectivity. It leverages the 3G wireless broadband to bring Internet connectivity to markets where wired Internet access has often been difficult to access or unaffordable.

Devices based on the Kayak reference design will offer a full-featured Web 2.0-capable browser from Opera Software able to perform at desktop resolutions, access via the browser to Web 2.0 productivity applications, support for both television sets and computer monitors to be used as displays and/
