DEALERS ENQUIRY SOLICITED

companies are looking at for savings include employee fringe-benefits. As an example, videoconferences and c-ports are becoming popular by the day as corporates start to wield down on excessive executive travels. With fuel prices skyrocketing, these small endeavors can turn out to be of good value in the long run.

More customers could be the key

Some companies like A.V. Systems, however, are looking at increasing their customer base instead of too much cost-cutting. Due to the increase of terror attacks in the past few months, it is targeting to provide a fully customised security solution for government sectors and PSUs with an immediate plan to launch a cost-effective security solution by using video management system. In the near future, it intends to capture the security solution market of the middle-east by acquiring a growing IT company of that region.

Rockwell Automation, on the other hand, has just finished acquisition of a Chinese company, which will extend its reach to Central and Western China. Some firms like Neural Systems, however, are looking at investing in R&D and re-planning the business as part of a long-term approach, thereby echoing the policy adopted by Sanstar India.

We have also identified a trend amidst some firms to focus on a niche market as a survival policy. Hita Technology is a good example of this as it flags off its move towards exploring the renewable energy sector with investments in solar power generation.

The tough get going

Amidst all this clatter, there are some organisations, however, which have remained apparently oblivious to their surroundings and continued with their growth plans as if nothing has happened. Farnell, for example, registered a growth of 21 per cent in the third quarter as against Q2.

"The key investments that we have made in people and technology, have

enabled us to be the 'supplier of choice' among electronics design engineers," said Salman Syed, director-APAC for Farnell.

APW President System has recently expanded the capacity of its manufacturing unit at Attibele, Bangalore, with the addition of a 45,000-sq.ft plot. Pramod Agase, COO of APW President System, said, "We strongly believe that the India growth story will continue, albeit after a momentary dip. And we also believe in our own ability to chart our destiny and maintain our record of sustained growth."

Fortunately for APW, it serves multiple segments like IT, telecom, general-purpose electronics, broadcasting and multimedia, which helps to minimise the negative impact.

Often it has to do simply with an organisation's strategy to keep a long-term vision, as was highlighted by C.S. Bhaskar, chief customer support-Technical at Circuit (Systems) India, and Anil Kumar Challyil, technical service manager at Arrow Electronics India. Arrow Electronics is also introducing a new business model targeting emerging customers from micro, small and medium enterprises.

For Sunny Malhotra, president of Tomen Electronics India, access to credit has not been much of an issue despite a sluggish 2008 as they plan to move ahead with their capital investments for the coming year. They are, in fact, using the slowdown to strengthen their customer relationship.

Though the primary trend, as we see here, seems to be of organic growth (about 93 per cent), a small fraction is keen on acquisitions as well. Cermet Resistronics, for example, is planning to acquire a European company and sell its products in Europe under the brand name of the acquired company as it's difficult to sell products in European market with an Indian brand name. A.V. Systems, as we have seen, also plans to hit the road with similar plans in the middle-east. ●
