

The sequential power-'on' circuit presented here switches on the loads one after the other with a regular time delay to avoid the limiting inrush current, especially after mains power resumes. It is designed for switching on 16 appliances with power-'on' reset facility.

Circuit description

Fig. 1 shows the circuit of sequential power-'on.' It comprises optocoupler 4N33, divide-by-12 counter CD4040, divide-by-16 counter
