Focus on PCB Design

TOP 5 SOFTWARE

AutoTRAX EDA

DesignWorks Professional 5

DipTrace 1.50

PCB Elegance 3.5

Fedora 10 Electronic Lab

AutoTRAX EDA. AutoTRAX EDA is a powerful integrated design suite for electronics engineers. It has all the features you expect and need to rapidly and easily take your design from conception through to production. Its in-built hierarchical project manager lets you perform both top-down and bottom-up design and reuse design components and sub-systems.

DesignWorks Professional 5. DesignWorks Professional 5 offers the best user interface for schematic capture. The program is designed to minimise the number of mouse clicks and keystrokes needed to complete a task. It includes such features as automatic gate packaging, unlimited hierarchy levels, customisable netlist and report generation, multilevel undo/redo, back annotation (from supported systems) and graphics export to PDF, DXF and WMF.

DipTrace 1.50. DipTrace is a complete PCB design system that includes four programs: DipTrace (to design PCBs with easy-to-use manual route and autorouter), Schematic (to create schematics and export netlist to PCB), ComEdit pattern editor and SchemEdit component editor. The PCBs

and schematics can be compared at any design stage to ensure these are identical. DipTrace modules allow you to exchange schematics, layouts and libraries with other EDA and CAD packages.

PCB Elegance 3.5. PCB Elegance is a CAD/CAM software for schematic and routing. It includes design manager, schematic/symbol editor, geometry and layout editor, and library manager for symbols and geometries. The design manager of PCB Elegance is the central tool to start the schematic editor, geometry editor and layout editor.

Fedora 10 Electronic Lab. It is a Live Linux DVD. A live CD/DVD is an optical media containing a bootable operating system. The unique aspect of a live media is that it can run straight off the media, without requiring a hard drive installation first.

Fedora Electronic Lab targets mainly the micro/nano electronic engineering field. It introduces tools for application-specific integrated circuit design flow process. (Please do not try to install it if you do not have enough knowledge of hard disk partitioning and operating system installation. If you do install it, take a backup of your data before installation.)
