

17V step-down synchronous switcher with integrated FETs.

The high-performance TPS54620 is claimed to be 60 per cent smaller than today's multichip converters, resulting in a complete 6A power solution less than 195 mm²—one-fourth the size of a postage stamp. The 1.6MHz monolithic DC-DC converter supports input voltages from 4.5V to 17V, allowing it to manage space-constrained 5V and 12V point-of-load designs, such as a wireless base station or high-density server.

High-temperature-sensitive triacs

STMicroelectronics has introduced triacs with 10mA gate sensitivity for operation up to 150°C without derating, enabling low-cost solutions for heaters, motors and other

small appliances, through savings in heatsinks and gate-drive power-supply and snubber circuitry. The devices introduced are the T410H, T610H, T810H and T1010H. Low gate current of 10 mA allows direct logic-level switching of the triac, which saves component count and reduces the size and cost of the power supply. In addition, the low gate current maintains high dynamic performance, maintaining specified minimal commutation and 75V/ μ s noise immunity at up to 150°C.

The triacs are ideal for control of AC loads such as electric heaters,

inductive heating equipment and medium-power motors.

Analogue front end

Microchip Technology has introduced the MCP2036 analogue front end (AFE) for inductive touch-sensing applications. The inductive-touch AFE works with almost any 8-, 16- or 32-bit PIC microcontroller or dsPIC digital signal controller. It includes a multiplexer, a

frequency mixer, an amplifier, a driver and a voltage reference, which lowers component count and reduces design size and cost. Additionally, the AFE can be easily configured for a variety of appliance, industrial and automotive applications.

Portable 3D stereo projectors

Dispro Visual Technologies offers 3D

Stereo projection systems for education, entertainment and professionals. 3D Mini is an affordable dual-purpose stereo display system designed for school education and entertainment, whereas 3D Pro is meant for professionals.

The 3D Mini dual SVGA DLP projectors come with high-quality heat-resistant glass polarising filters, matched high-quality polariser spectacles, 3D

projection screens and dedicated 3D-ready hardware player with 3D software loaded.

Wireless mini navigator mouse

Genius, a brand from KYE Systems, has introduced a wireless mini navigator mouse for notebooks. The mouse is available in stylish colours of ruby and blue, and also comes with two interchangeable faceplates in silver and black. It not only eliminates tangled cables but is also smaller in size and lightweight. Other features include a power-off function for power saving when not in use and an 800dpi optical sensor for precise tracking.

The mouse is priced at Rs 950.

Screw-mount style PCB supports

Novoflex has introduced new PCB supports: PCBM-95 with standard spacing height of 9.5 mm and PCBM-127 with standard spacing height of 12.7 mm.

The existing range includes PCBM-48 with standard spacing height of 4.8 mm.

The supports feature self-taping screws for quick and hassle-free installation, minimal chassis protrusion for limited-space or slimline application, and high tensile strength.
