

Do-It-Yourself Home Networking Projects

Set up a high-speed home network connecting the computers and peripheral devices in your home. This hands-on book shows you how to create a wired or wireless network so that you can share files, printers and other resources.

The book consists of 24 separate but interrelated projects covering the basics of broadband Internet connections through expanding your network in multiple ways. With these projects, you'll learn to control other PCs remotely, share network storage without a server, set up a webcam server, enable and share a cellular data connection, watch live TV from anywhere, integrate IM and VoIP applications into your network, run your own PC weather station and connect TiVo to your home network.

Chip-Talk Electronic Hobby Projects

This book (Part I, in particular) is aimed at budding hobbyists and freshers who desire to step into the fascinating world of electronics, but have little electronics background. It will impart them necessary knowledge in electronics fundamentals, wiring/assembly of circuits on a breadboard/stripboard and their testing. Even the experienced professionals, who have not kept themselves abreast of the changing technology, will also have something to gain from it.

Part II of the book provides complete details of over 40 interesting projects (from elementary to fairly advanced level), which have been duly tested by the EFY Lab. These projects have been picked out of a list of nearly a thousand circuits that have appeared in EFY magazine over the past decade or so.
