India gets tiny TV

ROK Entertainment Group, the mobile technologies, applications and services company, has launched Tiny TV across India with Bharat Sanchar Nigam Ltd (BSNL). Tiny TV is claimed to be the first nationwide, subscription-based, mobile TV service in India to be streamed over mass-market 2.5G GPRS.

Offering a range of live and on-demand mobile TV channels to include local and international news, sports, music and movies, Tiny TV is priced at Rs 150 per month payable via reverse-bill SMS.

Specifically, Tiny TV channels include News 24 (Hindi news), E-24 (Bollywood entertainment), ROK Bollywood (celebrity news), Geet (Hindi songs), Green (evergreen Bollywood music), Red (latest music from Bollywood), Gyan (devotional), regional channels of Gujarati and Marathi for West India, and Bengali for the East Zone, Tiny Sports TV, Tiny Comedy, Mobifun and a movie channel offering full-length movies wherein the users can pause, fast forward and rewind, plus a Sony package.

Graphical fantasy cricket game

Cricket enthusiasts can now experience an exceptional fantasy cricket. Dream11 Gaming has launched a graphical fantasy cricket game on Dream11.com which offers cricket enthusiasts an opportunity to create their dream team by selecting their favourite cricketers from across the world and earn points depending on how those cricketers perform in real life matches.

While Dream11 users compete with each other for the top spot on the leaderboard, features like live scores, news updates, player profiles, statistics and standings assist them in managing their virtual teams. On Dream11.com, users can challenge competitors as well as connect with friends over cricket

Dream11's Fantasy cricket game

using the Dream11 Web Messenger, scraps and other community features. The widget-based Web 2.0 portal will soon offer personalisation tools, which will enable them to customise content on their home pages.

Artillery combat command and control system

Presently, the artillery operations in the Indian Army are being carried out manually. Shakti, the artillery combat command and control system, developed by Bharat Electronics Ltd (BEL) in association with DRDO, makes use of advanced user-friendly software with GIS and GPS functionalities to integrate and automate all artillery operational functions, much faster and more accurately than the present manual system.

Shakti is the main sub-system of tactical command control and communication intelligence (Tac C3I) systems being fielded by the Indian Army. The components that go into Shakti are enhanced tactical computer, handheld computer, gun display unit, all of which are interconnected through tactical radio network, land lines or fibre-optic cable.

The major functions of Shakti are technical fire control (trajectory computation), tactical fire control (processing of fire requests and ammunition man-

agement), deployment management (suggesting deployment areas for guns and observation posts for defensive and offensive operations), operational logistics (timely provisioning of ammunition and logistic support) and fire planning (generation of fire plans, task tables and automatic generation of gun programmes).

Read newspaper on your mobile

Mobile users can now read English and regional newspapers on their GPRS-enabled mobile phones, thanks to a service called NewsHunt from Eterno Infotech. The NewsHunt mobile application can deliver regional language newspapers even on phones that do not support that particular language font. Currently, 15 English as well as regional language newspapers including the regional dailies like Dainik Jagran, Dainik Bhaskar, Sakal, Malayala Manorama, Matrubhumi, Dina Malar and Indian Express are available through this application. NewsHunt will also offer the local editions of the newspapers along with classifieds, entertainment, astrology and much more.

To download NewsHunt on your GPRS-enabled phones, SMS 'hunt' to 57333 and receive a link for free download via SMS.
