

services like ring tones, caller tones and wallpapers. They can now get mobile Internet content for free—all they need is a GPRS, which is available on demand from all providers (including all prepaid plans) and on nearly all devices,” explains Gopalkrishna. “A user can type in a particular URL to visit a webpage or send an SMS and enter a site. The programme is available on CD-40, ipods, Blackberrys, etc,” he adds.

The operator charges the user depending on the data transferred. Channels do not charge the user for accessing content. Mobile broadband works through cellular telephone networks. Its users subscribe for access to connections made wirelessly through smartphones or laptops.

Regional content

Mi Channels brings to consumers the choicest brands in local language newspapers, magazines and regional television channels. Availability of

In-device sensors in smart phones

In the future, smartphone sensors can be used in building adaptive user interfaces, advertising solutions based on context, interactive and real-time applications of social media, and services capable of predicting future movements and actions. Due to the increasing processing power and sophisticated sensor capabilities of today's smartphones, various kinds of next-generation mobile and Web applications can be built that are context-sensitive, capable of learning and real-time by nature.

regional content on mobile phones is scarce in India. With its cutting-edge technology, Mi Channels can now provide such content on mobile devices effectively. It will also bring breaking news, hot topics, entertainment and emerging trends to mobile phone users, enhancing user interest and hence repeated usage.

Mi Channels has a comprehensive

studio available to publish, distribute and manage mobile Internet services. Producers can monitor their mobile services—update content and spotlight items for users.

July Systems provides the world's leading mobile Internet platform that enables brands to publish and distribute on mobiles, monetise inventories and manage users. The Mi platform supports a wide range of devices and content types such as audio, video, images and applications, enabling publishers to offer a personalised experience to their audience.

“India has been chosen as the first country for the introduction of this programme as we are getting a significant response from handset manufacturers and operators here. We are in talks with potential partners to make the programme available to users soon and expect this to be achieved by the second week of June. Next, we'll launch the programme in the US,” reveals Gopalkrishna. ●
