COMPONENTS

Wide-band amplifier

Sanyo Semiconductor has developed a wide-band amplifier for intermediate-frequency stage aimed at down-converters (low-noise-block) for satellite reception. The MMIC SMA3101 is said to offer the industry's highest gain characteristics (25 dB) by using a wide

range of circuit simulation technologies and high performance of the bipolar transistor created with a unique silicon wafer technology process.

ESD protector

Portable consumer electronics designers can save board space with integrated circuits (ICs) in the PicoStar package of Texas Instruments (TI). The ultra-thin package—about as thin as a human hair—gives system designers the

option to embed silicon components inside the PCB to maximise board space. Devices in this form factor are 50 per cent thinner than similar chips in traditional packages and enable smaller, thinner end equipment.

The TPD2E007—a two-channel, robust electrostatic discharge (ESD) solution—is the first device available in the ultra-thin PicoStar package. It is a back-to-back diode array that allows AC-coupled data transmission without compromising signal integrity. The ability to embed this ultra-thin device in the board allows designers to save 80 per cent board space compared to typical ESD solutions.

POWER SUPPLY

Home UPS

Micro Technologies has launched a DSP-based sinewave home UPS with in-built smart battery management, five-stage battery charge control system and diagnostic aids. The Micro Power UPS has audio alarms for reset, system fault, overload, short circuit, low battery, water reminder and weak DC connection.

The UPS is available in capacities of 800 VA (priced at Rs 6400) and 1000 VA (priced at Rs 7400).

MISCELLANEOUS

Universal remote

Tired of replacing your old AC remote with new expensive ones or is your

model no longer available in the market? Smaller Universal Electronics Inc

brings you the 'One For All' universal remote which allows you to control up to three air-conditioners and works across all leading brands, however obsolete or recent the model be.

The remote enables a 2.8cm dot-matrix display with temperature control ranging from 18°C to 30°C and auto mode with an easy 3-step fan-speed control. It also comes equipped with a wall holder and a power saving mode which helps you program a predetermined time to switch on and off the AC automatically.

The remote is priced at Rs 995.

Metal-core PCBs

Buljin Elmec has started manufacturing metal-core (MC) PCBs for lighting applications in India. Aluminium-base MC PCBs, being heat sinkable, are used for power LED light applications. It is of paramount importance to use MC PCBs to achieve long life for costly high-power LEDs. The lights manufac-

tured using power LEDs on MC PCBs save energy up to 80 per cent.

The MC PCBs can be used for streetlights, down lighters, spot lights, strip lights and navigation obstruction lights.
