

Are you equipped to test new technology PCBs?

V2200 — Advanced Multi Functional Test System

High Speed / High Pin Count Board Functional Tester

Whole Board Functional Tester

Automated Guided Probe back-tracking to locate the faulty node

Boundary Scan Testing

Vast IEEE Standard VHDL device library

Fault Simulation & Fault Dictionary options

PXI Instrumentation

Patented technology of Bus Cycle Signature system for testing CPU based boards.

Parametric Measurement Unit for input bias current measurement, tri-state leakage test etc.

QScan - QT900 - Boundary Scan Tester

IEEE 1149.1 compliant JTAG port

Boundary Scan Controlled Synchronous Digital I/O channels

End-to-end Functional test

Individually configurable bi-directional I/O channels

Programmable voltage levels for Digital I/O

Specific set of channels can be by-passed to minimize scan time

Optional : Boundary Scan Controlled Synchronous Analog I/O

— where standards are set; not matched
