

ENGINEERING COLLEGES PAR EXCELLENCE

Ranked as per Industry Feedback

During the admission season, rankings of engineering colleges pop out of various sources. It is for the first time that electronics engineering institutes are ranked as per the preference of the Indian industry for their recruitment

■ SUDESHNA DAS

Nikhil, a boy from Chandigarh, visited the EFY office in the middle of May after completion of his Class 12th examination. He is a regular reader of the career articles of *Electronics For You* and is seriously thinking about pursuing a career in electronics. He wanted us to help him select a good engineering college for electronics. He was also keen to know the possibility of a bright career in electronics without a degree from any of the IITs or, for that matter, even any decent government engineering college.

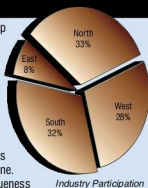

Methodology

The target respondents of this survey were the top executives from the Indian industry who play a vital role in selection and nurturing of the fresh talent coming in from academia. Each of them had to answer about their preferred institutes for recruitment of electronics engineers.

The answers were sorted on the basis of the geographical location of the institutes. The education sector of India was divided into four zones: East, West, North and South. Thereafter, the top ten preferred institutes (both government and private) were selected from each zone. Rather than ranking them, we tried to represent their uniqueness with respect to the offering to the industry.

Sample size. The research targeted to seek feedback from 100 respondents. Of the 100 people contacted, as many as 77 participated. Participation of companies by zones follows: North-33 per cent, West-28 per cent, East-8 per cent and South-32 per cent.

Selection parameter. Potential to build talent according to the industry need.

As colleges across the country gear up to enroll another batch of students, these are some common questions in the minds of new entrants—in search of a successful career. In most cases, while selecting a college, they trust on the nation-wide ranking systems to make judgement. By and large, educational institutes of India are ranked by different groups, both private as well as governmental, on the basis of some typical parameters like infrastructure, faculty and placement.

However, we at EFY preferred using a single metric to rank institutes for their electronics engineering related courses—the quality of their product, i.e., passouts. This, no doubt, is more
