consumers, but would be good for the environment too.

The GSMA and 17 leading mobile operators and manufacturers said at the Mobile World Congress that they are committed to implementing a cross-industry standard for a universal charger for new mobile phones. The aim of the initiative, led by the GSMA, is to ensure that the mobile industry adopts a common format for mobile phone charger connections and energy-efficient chargers resulting in an estimated 50 per cent reduction in standby energy consumption; old chargers currently generate more than 51,000 tonnes of waste a year.

The group plans to make a universal charging solution widely available by year 2012. It will use Micro-USB as the common universal charging interface. So by January 2012, the majority of all new mobile phone models available will support a universal charging connector and the majority of chargers shipped will meet the high-efficiency targets set out by the OMTP (Open Mobile Terminal Platform)—the industry body who developed the technical requirements for universal charging solution.

## Next-gen Windows phones

Microsoft is working with partners across the industry to deliver a new generation of Windows phones. These phones will be based on Windows Mobile 6.5 and feature a new user interface and a richer browsing experience. In addition, they will feature two new services: My Phone, to sync text messages, photos, video, contacts and more to the Web; and Windows Marketplace for Mobile, a new marketplace that will provide direct-to-phone mobile applications and can be accessed from both the phone and the Web.

The Windows Mobile 6.5 home screen will keep you up-to-date on important information by providing a dashboard-like experience to items such as new e-mails, texts, missed calls and calendar appointments. The improved touch-screen interface makes it easy to take action with a finger.

The free My Phone service will enable you to access, manage and back up your personal information on your device to a password-protected Web-based service. With automatic syncing and backup, you can count on your contacts, appointments, text messages and other information being kept up to date and easily restored should you lose or upgrade your phone. You will also be able to automatically upload photos and video from your Windows phone directly to the My Phone service.

The new Windows phones are expected to be available in the second half of 2009.

## Solar-powered touch phone

Samsung Electronics has unveiled a solar-powered, full-touch-screen phone called 'Blue Earth.' By charging with the solar panel located on the back of the phone, users can generate enough power to call anytime anywhere.

Blue Earth is made from recycled plastic called PCM, which is extracted from water bottles, helping to reduce fuel consumption and carbon emissions in
