

video pictures; and HD-resolution dynamic 3D-looking user interfaces.

Share your whereabouts with friends

Google has launched a new service, Latitude, that lets cell-phone users share their location with friends. The service is part of Google Maps for Mobile—the company's mapping software for mobile phones—but can also be used through a gadget loaded onto its iGoogle customised home page. It will work in 27 countries.

Google Latitude

Latitude can be downloaded on the mobile phone and invitations can be sent to friends and family to join the service. The location-based service only works with prior permission from the other person. Privacy settings can be adjusted in Latitude so that you share as much or as little about your location as you want, with whom you want.

So for each person, you can choose to share your available location or your location when you travel to a different city, or you can be completely unavailable. Everything is under your control and, of course, you can sign out of Latitude at any time. The service also allows the user to communicate with friends through text messaging, instant messaging or a phone call.

The application is independent of mobile operators and can be downloaded free from the Google website.

Futuristic transport system

The implementation of an intelligent transport system (ITS) in India may now be postponed for some time.

ITS refers to the use of new technologies like mobile phones and the worldwide web to guide traffic within a city. Once the system is in place, you can get mobile alerts while driving, indicating the routes with high traffic congestion and suggesting alternative route.

It also means toll collection can be made electronically, which can enable you to drive through toll gates without facing a traffic snarl. In the case of an accident, an in-vehicle emergency e-call can be generated to the nearest emergency

THE NEXT GENERATION CONSTANT CURRENT HIGH POWER

LED-DRIVER

- Ready to use - Plug & Play
- Up to 1.2A Constant Current
- Up to 97% Efficiency
- Wide Input Voltage Range 4.5-36 volts (soon 9-70 volts)
- PWM/Digital Dimming
- 100% linear Analog Dimming
- 100% linear Resistor Dimming
- Low Emissions (EN-55022)
- Long lifetime up to 600,000 hrs.
- Ultra Miniature Design (Through hole, SMT and wired)
- High op. temperature/85 °C (ambient)
- No external components necessary for basic use

TYPICAL APPLICATIONS:

- Professional lighting
- Decorative lighting
- Theatrical lighting (stage lighting)
- Fluorescent/Bulb replacement
- LED street and traffic lights
- Digital Signage
- Outdoor lighting
- LED displays
- Backlight LED
- Low Voltage Lighting for Marine Applications
- Undersea Robotics
- Low Voltage lighting for Gardens and Parks
- Solar Powered Lighting
- Cabinet Lighting
- Freezer Lighting
- Interior Lighting in Public Transport
