point. The system can also provide information about parking space at any location in the city.

The system is futuristic, but the fear is that terrorists can access information each moment on traffic trends in a city. They can know where the traffic is most congested so as to cause maximum damage. Officials also fear that the central control room—from where the entire ITS facility of a city will be coordinated—can become the target of a terror attack, exposing the city to great risks.

Emergency alert via mobile

In an emergency you can register a missed call on Softspin's server. The server, in turn, will send text messages to the pre-saved numbers anywhere in the world with details like the location of the call, the mobile service provider and the country. This way, the service alerts your friends and family that you need help.

Softspin's server number needs to be saved under a speed dial on a mobile or a landline to enable a quick call. "A message also reaches the caller saying that help is on its way. Even if the network is jammed, messages do pass through as they don't require much bandwidth," Vinay Sathe, managing director of Softspin, says.

The service, Saviour, is available for a lifetime registration fee of Rs 200 and Rs 120 as yearly subscription.

Live news on the mobile

Motorola India and Pressmart Media, a digital publisher, have announced a live news-on-the-mobile service on MOTO V666, MOTOSURF A3000 and MOTOROKR EM35 phones slated for distribution in India.

The service will provide you

with access to branded news content powered by Pressmart. By selecting the WAP link 'Daily News' on your Motorola phone, you can receive free news content and access your favourite newspapers while on the go.

Newspapers offered on the service include *Indian Express*, *The Financial Express*, *The Asian Age* and *Deccan Chronicle*. A GPRS connection is required to access the free news content.

New Internet technology

Atoall.com has launched a new Internet technology that uses keyboard shortcuts to access Google, Orkut, Yahoo!, Microsoft and similar such popular sites. For example, if you want to visit Google, you will have to type the following three consecutive letters in the keyboard, 'gghhj.com.' To visit Orkut, you will have to just type 'ookmm.com.'

The technology makes it easier for

Atoall.com's search engine

the illiterate to use the Internet as in order to access a Website, one has to type three letters twice on the computer keyboard which are in a straight line; e.g., 'C' or inverted 'C', 'V' or inverted 'V', twice, followed by dot (.) com or ctrl+enter (for www. .com). Shortcut keys are located together on the keyboard, e.g., rddcc.com, cddrr.com, mmjnn.com and nnjmm.com.

This technology search engine invention also allows users to access their favourite games sites, videos, etc.
