

Display Excellence

HITACHI
Inspire the Next

FEATURES :

- Manufactured using TCP (tape carrier package) and COG (chip on glass) construction
- Exceptional optical performance, high performance, excellent colour saturation
- Low Power consumption, advanced LCD drivers, low voltage LC material
- Industry standard, screen sizes, format and resolution
- Screen size: 1.8" to 10.4"

TYPICAL APPLICATION :

- PDA
- ePOS
- Medical
- Industrial
- White goods
- Telecoms / Mobile Phones
- Instrumentations / Handheld
- Automotive / In-Vehicle System

Our products deliver exceptional performance, value and quality. Hitachi continually enhance an extensive range of industry standard LCD modules. Integrated DC/DC converters, wide temperature range LC fluids, long life high brightness CCFL tubes, low power white LED's and analogue resistive touch screens are being integrated to provide LCD modules suitable for many varied market environments and applications.

the world best
performance
is possessed

The IPS (in-plane switching) LCD is a horizontal electric field type LCD created by Hitachi. The simple movement of liquid crystal elements revolving in parallel with the glass substrates has realized this wide viewing angle LCD or gradation are so slight that the natural picture can be seen from any angle vertically and horizontally. The world best performance is possessed.
