

storage capacity of up to 500GB and strong data retention. It is a perfect portable storage solution for backing up and storing videos, photos, songs, graphics, documents, spreadsheets and more.

With transfer rates up to 480Mbps, this device can backup your entire desktop or laptop in just minutes with one push of the backup button located on the drive's front panel. It utilises the clone PC software to provide a powerful and reliable backup solution.

Power Store is made of lightweight stainless steel and plastic. All Strontium external hard drives have passed Windows 7 compatibility testing. Strontium Technology, New Delhi

USB Flash Drive

Kingmax has launched its new USB flash drive—U drive UD02—with PIP technology. It is waterproof, pressure-resistant and tolerant to high/low temperature (+100°C ~ -40°C) which help in protecting data from external accidents. It is certified with CE, FCC and BSMI standards and is compliant with RoHS, Halogen free and PFOS/PFOA directives. Available in 4GB, 8GB, 16GB and 32GB capacities, UD02 is warranted by Kingmax with global lifetime.

NETWORKING

USB 2.0 peripheral switches

ATEN International has released its new 2- and 4-port USB 2.0 peripheral switches. The US221A and US421A enable up to two or four PCs and Macs to share one multifunctional printer or USB peripheral device such as a scan-

ner or portable hard drive.

The peripheral focus can be given to a computer manually by using push-buttons on the switch, the software-based configuration utility or the auto switch function. When the US221A or US421A connects to a USB printer, it automatically recognises the computer sources of print jobs and alternates the focus by the printing order.

US221A and US421A USB 2.0 peripheral switches have LED indicators to display port focus. They can transfer data at a speed of 480Mbps and can perfectly connect external hard drives or print large files.

Wiring closet modules

Extreme Networks has launched the BlackDiamond 8500-series modules. The new wiring closet modules offer a high-value solution which addresses customers' needs for cost-effective feature-rich switching capabilities, with natural upgrade paths for scalability and growth on demand.

Organisations require an end-to-end network with advanced automation features to discover network edge devices, resiliency to handle fiber outages with minimal impact to users and security to identify and mitigate threats. The BlackDiamond 8800 addresses all these requirements with a comprehensive family of module choices on a single chassis and uniform operating system—nExtremeXOSR. It is therefore a total modular solution to tackle the most flexible network deployments.

MISCELLANEOUS

Heat power gun

Jaya Electronics has launched digitally temperature-controlled hot air guns.

Available in 230-volt operation, these guns are portable with different wattages for different applications.

The handheld guns can be used for removing paints and varnish, self-adhesive stickers, loosening rusted or overtightened nuts and metal screws, shrinking poly vinyl wire joints, shrinking PVC shrink-wrap sheeting for packaging protection, waxing and de-waxing skis, fast drying of paints and varnish, thawing frozen pipes, frozen door locks, de-soldering work, etc. Replaceable accessories are used for different applications and different models are available with the facility to adjust temperature from 120°C to 590°C.

Microprocessor-based motor protector

MRK Engineers has launched microprocessor-based motor protector which is suitable for all HP motors—single-phase or three-phase up to 2000 amps. Using such an instrument with mo-

tor will avoid burning of motor against single phasing, reverse phasing, overload, over voltages,

under voltages, etc. All parameters can be programmed as per the customer's requirement.

The instrument has in-built auto switch, digital voltmeter and ammeter with auto scrolling facility. If any fault occurs and power fails, and if faulty conditions are stored in the memory after power restores, the motor does not re-start unless the fault is reset.
