## Solar charger project

I would like to congratulate author Arun Kumar Vadla for his project 'Microcontroller-based Solar Charger,' published in September issue of EFY. The project is very helpful for people like me who want to use renewable energy resources like solar power.

Recently, I have installed a solar lighting system in my house and have tried to procure a solar-charge controller with an in-built voltmeter but it is not easily available in the Indian market. Those available online are very costly. Once again, my congratulations to the author and EFY team for presenting such a good article.

Nischay Kumar

## Solar panel

I am interested in doing business in the area of renewable energy resources, especially solar energy-based products. Please let me know about the availability of solar panels in India.

EFY: Please visit [www.eleb2b.com](http://www.eleb2b.com) to find out the contact details of solar panel manufacturers/distributors in India.

## Career guidance

I feel there are more advertisements than articles in EFY. I expect more articles on technical topics. I would also like to request you to start a column on career guidance for students to help them choose the right courses from a plethora of technology options. Also, students need help in selecting careers in which job opportunities will be good.

Shobha  
Via e-mail

EFY: We are exploring the option of restarting the career column.

## EFY projects

I am reading EFY since my school days. Without EFY, I would not have

accomplished what I have so far. Today, I would like to share with you that at the institute I work for, we have successfully constructed 321 projects published in EFY. Now, one of my students is working on the 'Inverter for Soldering' circuit, published in September issue. I wish to convey my sincere thanks to EFY and its team.

M.K. Chandra Mouleeswaran  
Auztra Institute of Science & Technology, Dharapuram, Tamil Nadu

## Scrolling message display

I want a hardware project for scrolling a word by using 8x8 dot-matrix LED interfaced to a AT89C51 microcontroller. Please help me and give me a reference.

Lavanya  
Via e-mail

EFY: You can refer to the project 'Microcontroller-based moving message display' published in EFY's April issue. You may contact our associates Kits'n'Spares on 011-26371661 or [kits@efyindia.com](mailto:kits@efyindia.com) to get more details.

## IR remote control

I have assembled the 'Remote Control For Home Appliances' circuit, published in EFY's May 2005 issue. I have mounted all the components properly but there is a problem of false triggering in the circuit. Could you please provide me an alternative solution?

Vishal Ahuja  
Kanpur

EFY: The mentioned circuit is based on an infrared (IR) remote control. The circuit employs a TSOP1738 IR receiver module. This IR module is prone to false triggering if there is sparking in household electrical wiring or if it is kept near a tubelight. You don't have to use another circuit to avoid false triggering. You need to cover the assembled kit in a metallic enclosure for shielding or keep the kit away from a tubelight.

Note that the proper working of this circuit was checked thoroughly and it works well.
