Speech-based song search application

Conviva has engaged Nuance Communications to build a speech-based song search application for telecom service providers in India. The application called 'Song Search' will enhance the usability of music search applications on mobile phones. 'Song Search' will eliminate the need for mobile consumers to key in text or navigate complex menu hierarchies while searching for music or ring tones. Instead, it will allow users to speak the words of the title of the song as the user remembers it and selects to download.

Bharti Airtel offers end-to-end Ethernet connectivity

Bharti Airtel has launched Ethernet services in more than 25 global cities across Asia, Europe, North America and Australia. Ethernet offers overall connectivity as it simplifies customer-network integration and provides increased flexibility in choosing the bandwidth. It is emerging as the most secure medium for future high-speed connectivity. As a promotional offer, Bharti Airtel is offering 'One Capacity One Price' to both the enterprise and wholesale customers in the US, the UK, Singapore and Hong Kong.

Vembu's backup solution

Vembu Technologies has launched Vembu Home, a flexible and reliable backup solution for consumers, who want to easily protect their digital files. Vembu Home is supposed to be the first and only unified backup solution that lets consumers perform backups to local media, the Amazon Cloud, or to both. Vembu Home is based on the company's StoreGrid technology, a data backup software currently running on more than 100,000 computers worldwide.

Adobe Flash Player comes to smartphones

Adobe has announced the Flash Player 10.1 software for smartphones, smartbooks, netbooks, PCs and other Internet-connected devices. A public developer beta of the browser-based runtime is expected to be available for Windows mobile, Palm webOS and desktop operating systems including Windows, Macintosh and Linux by year end. Public betas for Google Android and Symbian OS are expected to be available in early 2010.

HIGH-RESOLUTION DIGITAL CAMERA

GENIUS' G-SHOT V 1200 CAN CONFIGURE BACKGROUND AS PER USER REQUIREMENT

Genius has launched its latest digital camera—G-Shot V 1200. A high-resolution digital camera with a stylish and compact design, it comes with a 12-megapixel CCD sensor.

Features & USP. The camera comes with a 6.86cm colour display and 3x optical zoom. Other notable features

include anti-blur, an intelligent mode that helps the user to take a photo of a performance that automatically detects eight different types of scenes and chooses the appropriate camera settings. It has a high ISO value of up to 6400 to reduce the effects of the camera shaking.

Price: Rs 10,995

The G-Shot V1200 also has a pre-composition mode to configure the background that the user wants and more than 29 vivid scenes are available to get a clear image, along with an anti-blink mode. Both the options support an HCSD card of up to 32 GB and have a 16:9 HD resolution to fit the HD TV ratio. The camera also supports file formats like JPEG and MJPG.

BenQ's ALL-IN-ONE PC

BENQ'S nSCREEN i91 AND i221 TAKE INTERNET SURFING TO A NEW LEVEL

BenQ has launched its first all-in-one PC for the Indian market with 47cm nScreen i91 and 54.6cm i221.

Features & USP. Getting rid of complicated cables and portals, the nScreen allows users to enjoy the Internet after plugging in and switching on the machine through its simple installation and user interface. The nScreen i91 and i221 perfectly integrate a computer inside a high-definition widescreen with an aspect ratio of 16:9.

BenQ integrates the interface of a plug-and-play device into the nScreen i91 and i221 to make operation even simpler. For example, a knob on the bottom right of the computer front functions as a power button and a volume control like a TV. Users can also

Price: Rs 26,999 onwards

buy an optional nScreen handset which may be used together with a built-in 1.3M webcam as a simple voice over Internet protocol (VoIP) videophone. With its 30W power consumption, BenQ nScreen saves energy by using 80 per cent less power than a traditional desktop.
