

How To Choose A HOME THEATRE SYSTEM

Want to recreate the movie theatre experience at your home? Read on, as we help you make up your mind

■ ABHIJIT PAUL CHOUDHURY

Until recently, the best way to enjoy movies was to go to a theatre as the picture size, quality and the sound experience are much better compared to normal TVs. Projectors are used for displaying images on the big screen. For that unbeat-

able sound, three speakers are placed behind the screen, one at the centre and the other two at the right and left of the screen. Besides these, there are a few rear speakers placed to the right and left of the audience to give the surround sound effect.

Now, home theatre systems can recreate the movie theatre experience at your home. But what exactly is a

home theatre system? It is a combination of various electronics components put together to replicate the movie theatre experience.

These include a wide-screen television, DVD or Blu-ray players, four or more speakers with sub-woofers, equipment to split the surround sound (also called the audio/video receiver) and cables. The performance of a home
