

Philips HTS 3366

- Output power - 600W
- USB 2.0 support for video/audio
- HDMI (1080P) upscale support for sharper pictures
- DTS, Dolby Digital, Pro Logic II surround sound

Price
Rs 16,990

in front of you, and three speakers behind you, or at your sides. The audio signal coming out of the player is split into various channels, such that the surround sound effect can be created in the room.

The most prominent sound comes from the front speakers. If someone at the right end of the screen is speaking, then that dialogue appears to come from the right speaker, and vice-versa. The centre speaker is the most important as it anchors all the sound coming out from the left and right speakers. The dialogue and other sound comes mostly from the centre speaker. The rear speakers that are placed at the right, left or behind you are for other low intensity sounds, like a dog barking in the distance, the sound of a passing car or bike, or people speak-

ing in the background of a main action. But the important thing is how the sounds are split, which is the work of the audio/video receiver.

Audio/Video receiver. This is the heart of a home theatre system. The main task of the system is to receive inputs from the input devices and interpret and transfer them to the corresponding output devices. A audio/video receiver comprises various components such as an input source (DVD player), a preamplifier, a surround sound amplifier (signal processor), a power amplifier for each sound channel, output for speakers and the TV.

The input device, such as the DVD player, feeds a signal into the receiver unit. You have to choose which input component you want to feed to the output unit, and the preamplifier selects this signal and amplifies its line

Sony DAVFZ 900

- Output power - 1000W
- S-AIR surround speaker wireless
- Straight tall boy type speaker
- HDMI (1080P) with BRAVIA Sync
- FM Tuner included
- USB music rec and play (Walkman phone compatible)
- USB movie playback (DivX & MPEG4 simple profile)
