

Ares (Utilities, 2.1MB)

Ares is a file sharing P2P software that helps you share your files with others. Using this software, you can download movies, games, software and images through P2P network. The latest version of Ares supports BitTorrent Protocol and Shoutcast radio stations. With Ares you can also join chat rooms and meet new friends. If you become a member of the Ares virtual community, you can search for and download any type of files shared by other users through P2P network. The latest version of Ares supports XP and Vista. For more information visit <http://www.ares.net/>

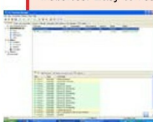

**Free Download Manager**

(Utilities, 6.4MB)

File Download Manager (FDM) is a free and open source download accelerator and is distributed under the GPL licence. It supports BitTorrent files, and has an upload manager which makes sharing of files easy. Flash video download allows you to download files from YouTube and other similar websites. Easy to resume broken downloads, FDM

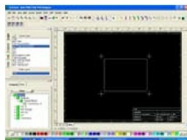

has a smart file management and powerful scheduler. These features make it a powerful software.

**AutoTRAX (Design and Simulation, 23.4MB)**

AutoTRAX is a product of Kovac Software. It is an integrated electronic design suited for the electronics engineers. The latest version of the software is 9.64, which gives you all the features that are required to take your product from conception to production. It also has top-down and bottom-up approaches and you can reuse the components and the subsystems that have been used in other projects. AutoTRAX software comes with a schematic entry, circuit simulation, PCB layout, auto-routing and mechanical device management.

PCB layout provides you with features like fully automatic placement with pre-placement of critical components, manual push-and-shove placement, precise numeric placement, position locking, mixture of automatic and manual placement, real time rats-nest and placement force vectors and cluster placement support. AutoTRAX has a very good component directory. It also has a rapidly select components option that helps to create your own new components. You can use the powerful device modeler to add simulation device models. You can also export IDF file to 3D modelers such as Solidworks and AutoDesk's Inventor. It also has Gerber output plot. The latest version of the software has 2D and 3D features and it incorporates all relevant features of Orcad and Diptrace. For more information visit <http://www.kov.com/QuickTour/Start.aspx>

**ARM - 9 Development Boards****NGE**
Electronics & Beyond**FEATURES**

CPU: 400 MHz Samsung S3C2440 ARM920T
RAM: 64 MB SDRAM, 32 bit 100 MHz Bus
Flash: 64 MB NAND Flash & 2 MB NOR Flash with BIOS
User Outputs: 4x LEDs
 web server / USB / MMC / Audio I/O
Debug: 10 pin JTAG (2.0mm) with touch screen
Support: OS, Linux 2.6, Windows CE 5
