POWER SUPPLY

Compact UPS

APC by Schneider Electric has introduced MGE Galaxy 7000 UPS for IT and other mission-critical equipment. The UPS can be fully adapted for a range of applications from large data centres to industrial and manufacturing operations.

In data centres, the MGE Galaxy 7000 meets the need for high levels of power availability and runtime in a small footprint. In standard form, the UPS as unitary can support a load from 250 kVA to 500 kVA and provide up to two hours of autonomy in the event of mains power failure. Its compact size and back-to-back or back-to-wall installation enables more room to be utilised for other equipment than traditional UPS systems.

The MGE Galaxy 7000 also boasts of a 94.5 per cent efficiency rating in double conversion mode (up to 97 per cent in optional economy mode).

Power extraction modules for POE

Infomart has launched the PEM1000 series of powered device modules that extract power from Cat5 Ethernet cable when sourced from IEEE 802.3af-compliant power sourcing equipment.

Modules are available in variants of 3.3V, 5V and 12V output voltage, and

designed for any Ethernet device with power consumption of up to 13 watts. They provide a quick, easy and low-cost method for Ethernet equipment manufacturers to 'PoE-enable' their equipment, and eliminate the need for a local equipment power source, significantly reducing installation costs.

Key features are wide range of input voltage (36 to 57V DC), 13W output load, adjustable output voltage, low output ripple and noise, overload and short-circuit protection, 1500V DC isolation (input to output), operating temperature of -10 to +70°C, 85 per cent efficiency, and minimal PCB footprint and compact package (5.6x1.4x1.7 cm³).

TEST & MEASUREMENT

Powerscope

Scientech Technologies has introduced a microcontroller-based powerscope

with digital readout. The Caddo 829 can measure floating signals up to 1500V (DC+peak AC). All power signals from single-phase and three-phase can be analysed with great convenience. Vertical bandwidth of 1MHz DC covers all power related applications. Fully stabilised internal power supplies and rugged design ensure stable reading and trouble-free working.

Earth-ground testers

The Fluke 1623 and 1625 testers can perform all four types of earth-ground measurements: three- and four-pole fall of potential using stakes, four-pole soil resistivity testing using stakes, selective testing using one clamp

and stakes, and stakeless testing using two clamps only. You can perform earth-ground

tests in places you've not considered before: inside buildings, power pylons or anywhere you don't have access to soil.

In addition, the Fluke 1625 offers advanced features like automatic frequency control for identifying existing interference and choosing a measurement frequency to minimise its effect, providing more accurate earth ground value.

Waveform monitors

Tektronix, Inc. has introduced new waveform monitors that provide high-quality, real-time, automated 3Gbps
