

SDI Eye pattern display and jitter measurements. So broadcasters and network operators can effectively diagnose signal problems, while equipment designers and manufacturers benefit from reduced time to market of new 3Gbps SDI products. Two models are available: WFM8200 and WFM8300.

The WFM8300 (with Option PHY) also features multi-rate HD/SD-SDI and 3Gbps SDI (with Option 3G) colour bar and pathological signal generation capabilities, providing engineers with a simple signal source for quick signal path verification during system setup and troubleshooting.

In-circuit testers

Agilent Technologies Inc. has introduced an in-circuit test (ICT) system that features a new analogue measurement technology together with 12MHz hybrid pin card, giving electronics manufacturers 20 to 30 per cent throughput improvement over the current i3070 at the same prices. This enables contract manufacturers to considerably reduce their cost of test while increasing coverage.

The Medalist i3070 Series system also allows manufacturers to incorporate external circuits easily for added test coverage while providing better control of those circuits. Instead of having multiple sets of external circuits in multiple fixtures, manufacturers can now put the external circuits in the testhead. This way, they need only one set per tester.

STORAGE

32GB Flash drive

Imation India has announced a 32GB Flash drive called Nano Pro. The new

drive is the smallest of the Imation USB drive family and features an all-in-one swivel cap design that protects the drive and makes lost caps a thing of the past.

Combined with password protection and drive partitioning software for Windows (Windows 2000 and above), the Nano Pro is an affordable way to safely transfer data, music, photos or video.

The plug-and-play format allows you to drag and drop files with ease on almost any computer with a USB 1.1 or 2.0 port. No software installation (Windows 2000 and above), additional power supply or cables are required for using the drive. Besides Windows, it is compatible with Mac OS and Linux as well.

The drive is priced at Rs 4500.

COMPONENTS

Synchronous buck regulator

Linear Technology has announced a high-efficiency, synchronous buck regulator that can deliver up to 15 mA from a very small footprint for single Li-ion-powered applications. The internal synchronous switches deliver efficiencies as high as 95 per cent, while burst-mode operation requires only 18 μ A of quiescent current, maximising battery run time.

The LTC3620 can take a 2.9V-5.5V input, and is adjustable to outputs as low as 0.6V, whereas the LTC3620-1 option is internally programmed to provide a 1.1V output, eliminating the need for external feedback resistors. The LTC3620's 2x2mm² DFN package with only four tiny externals ensures a very compact solution footprint for a wide array of ultra-low-power applications.

Class-D audio amplifier

Texas Instruments Incorporated (TI) has introduced a 15W stereo, filter-free, analogue-input, Class-D audio amplifier—the TPA3110D2. The advanced electromagnetic interference (EMI) suppression technology of the device eliminates the need for costly inductor-based output filters, reducing bill-of-materials cost by as much as 50 per cent. The SpeakerGuard protection

circuitry protects speakers from damage, helping to reduce end-equipment customer returns and associated support costs.

The TPA3110D2 is a good choice for consumer audio applications, including HDTVs, media docking stations, digital radios and sound bars.

Radiation-tolerant FPGAs

Actel Corp. has introduced RTAX-DSP prototype FPGAs with embedded radiation-protected multiply-accumulate blocks for designers of space-flight systems. The new devices have the same pin assignment, mechanical footprint and identical timing properties across the full military temperature range (-55°C to 125°C) as their space-qualified counterparts.

Providing a flexible alternative to expensive radiation-hardened ASICs, RTAX-DSP FPGAs feature up to 120 multiply-accumulate DSP mathblocks, protected against radiation-induced single-event upsets and single-event transients. These offer high perform-
