

Article for Publication

I am an R&D engineer and have designed a sinewave inverter based on Microchip's PIC16F72 microcontroller. The inverter uses buck-boost type charger and single transformer, and has overload, short-circuit, battery-low and battery-overcharge protection. Please tell me how can I submit this project to EFY for publication.

Anil Poulse
Kochin

EFY: You can e-mail the project details along with circuit diagram and source code to editsec@efyindia.com

PIC16F84 Microcontroller

Please tell me where can I get the details about building a PIC16F84 programmer and the related software.

Mohan
Bengaluru

EFY: You may refer to the 'PIC Burner: Programmer for 16x8x' article published in *Electronics Projects Vol. 23*. To purchase this book, dial EFY associates Kits'n'Spares at 011-26371661. A lot of information is also available on the Internet. One such site is 'www.kmitl.ac.th/~kswichit%20/f84/f84.htm'

Speedometer-cum-Odometer

I am assembling the 'Microcontroller-based Speedometer-cum-Odometer' project published in EFY Nov. 2008. Please tell me where can I get the source code of this project.

Suraj Jain
Through e-mail

EFY: The source code of this project was included in the EFY-CD of Nov. 2008 issue. Please contact Kits'n'Spares to purchase the CD. You can also purchase the complete project kit, along with programmed chips, from them.

Cadstar11.0 Software

While installing the Cadstar11.0 software included in the EFY-CD of August issue, it asks for a password. Please tell me the password.

Jayanta Banerjee
Through e-mail

EFY: Visit the website 'www.cadstar.org/' and register yourself for free. They will send a password to your e-mail ID. Use this password during installation.

Automotive Electronics

Automotive electronics is new in India. So please publish in EFY some information about ABS, retarder and automatic transmission.

Circuit Ideas and Construction Projects

I have been a regular reader of EFY for the past 15 years and benefited a lot from it. But nowadays the circuits published under 'Circuits Ideas' section are quite repetitive. All are just simple burglar alarms, water-level indicators or IR remotes based on the same principles with a few modifications. Also, the projects are mostly based on ATMEL microcontrollers. I request you to publish circuits based on Microchip PIC microcontrollers as these are cheap, small and readily available.

AchuWilson
Through e-mail

EFY: Thanks for your feedback and candid criticism! If you observe the published circuits closely, you will find that the applications and principles may be the same but the designs are different. They are just like different makes and models of TV sets on display in an electronics showroom to suit varying requirements of customers. These circuits may be boring to some but can be very informative for others. Nevertheless, we have noted your observation. We have published a number of projects based on Microchip PIC, Atmel, Motorola/Freescale and Texas Instruments microcontrollers in the last ten years. If you are interested, we can send you the list of these projects.

Please do keep writing to us with your suggestions and requirements. We will try our best to publish more useful projects in EFY.

☐ Of late, the quality of construction projects and circuit ideas has degraded. It seems that now EFY has nothing

for hobbyists. Projects and circuits are repeated frequently and the conceptual level of projects is not very good. Worldwide, the electronics technology is growing rapidly. With the largest circulation of a technology magazine in India, you have the responsibility to take care of standards that meet global challenges. It seems that nowadays our favorite magazine EFY is only meant for the industry or for student to compile their technical seminars.

Devesh Samaiya
Through e-mail

EFY: We request you not to loose faith in us as we are constantly trying to publish innovative projects in every issue. Meanwhile, readers willing to share their interesting projects may e-mail the project details to editsec@efyindia.com.

Audio Splitter for Laptops

I have assembled the 'Audio Splitter for Laptops' circuit published in EFY Dec. 2008, but couldn't get the output in the headphone. The rating of the speakers is also not specified in the article. Please help.

Aravind
Through e-mail

The author Vasuki Prasad replies: The circuit is fully functional. Ensure that the wiring is correct. While soldering the IC, overheating may damage the IC. The speaker rating for the headphone/earphone can be 16 ohms or 32 ohms.

Automatic Door Bell

I have assembled the 'Automatic Door Bell' circuit published in February issue, but found that the TSOP1738 receiver module is unable to receive the 38kHz signal from the IR LED. Please help.

Yuvraj Sonker
Jalpaiguri

The author T.K. Hareendran replies: Recheck your circuit and make sure that the pin orientation of TSOP 1738 is correct. If the problem persists, try replacing it with a fresh piece. Also ensure correct working of the IR transmitter section. Use a good-quality IR LED (like LD271) for the transmitter.
