

Industry's first programmable-output 16-bit DAC that is flexible and robust

Highly configurable, protected $\pm 10\text{V}$ or 4–20mA output is ideal for demanding industrial automation applications

The MAX5661 single-channel, 16-bit DAC integrates the precision high-voltage/current amplifiers required for industrial process control systems under the most extreme conditions. Its flexible analog supplies provide either unipolar current or unipolar/bipolar voltage output along with a highly robust $\pm 25\%$ overrange feature.

- Force-sense outputs (voltage mode)
- CLR input resets output to programmed value or zero state, or maintains output in current state
- Provides flexible analog supplies for outputs
- Dropout detector senses out-of-regulation current output

EDN **FINALIST**
INNOVATION

Part	Resolution (Bits)	INL	Supply Voltage (V)	Price* (\$)
MAX5661	16	± 4 LSB (voltage output)	± 15.75 (voltage output), $+40$ (current output)	5.50

Maxim offers over 245 variations of high-precision, general-purpose digital-to-analog converters (DACs).
